International Edition Engaging and provocative writing, as well as a knack for revealing the 'invisible hand' of economics at work has made Tyler Cowen and Alex Tabarrok's text a singularly distinctive and effective text for principles modules. Modern Principles of Microeconomics places an emphasis throughout on the power of incentives which underscores how economics helps us understand why we do what we do (in other words, the decisions we make in the face of incentives in the real world). The new edition retains its progressive approach to economic modelling and applications which allows for a more realistic interpretation of today's world events. Mirroring the authors' successful blog, the

Tyler Cowen's controversial New York Times bestseller—the book heard round the world that ignited a firestorm of debate and redefined the nature of America's economic malaise. America has been through the biggest financial crisis since the great Depression, unemployment numbers are frightening, media wages have been flat since the 1970s, and it is common to expect that things will get worse before they get better. Certainly, the multidecade stagnation is not yet over. How will we get out of this mess? One political party tries to increase government spending even when we have no good plan for paying for ballooning programs like Medicare and Social Security. The other

party seems to think tax cuts will raise revenue and has a record of creating bigger fiscal disasters than the first. Where does this madness come from? As Cowen argues, our economy has enjoyed low-hanging fruit since the seventeenth century: free land, immigrant labor, and powerful new technologies. But during the last forty years, the low-hanging fruit started disappearing, and we started pretending it was still there. We have failed to recognize that we are at a technological plateau. The fruit trees are barer than we want to believe. That's it. That is what has gone wrong and that is why our politics is crazy. In *The Great Stagnation*, Cowen reveals the underlying causes of our past prosperity and how we will generate it again. This is a passionate call for a new respect of scientific innovations that benefit not only the powerful elites, but humanity as a whole.
