Data management tool for monitoring & evaluation | TolaData

Monitoring: This type of evaluation is performed while a project is being implemented, with the aim of improving the project design and functioning while in action. An example given in the World Bank Technical Paper, Monitoring and Evaluating Urban Development Programs, A Handbook for Program Managers and Researchers by Michael Bamberger, describes a monitoring study that, by way of rapid survey, was able to determine that the amount of credit in a micro credit scheme for artisans in Brazil ...

Monitoring and Evaluation

In most cases an M&E system refers to all the indicators, tools and processes that you will use to measure if a program has been implemented according to the plan (monitoring) and is having the desired result (evaluation). An M&E system is often described in a document called an M&E plan. An M&E framework is one part of that plan.

How to create a monitoring and evaluation (M&E) system ...

Design an appropriate monitoring and evaluation system for the emergency response. Ensure monitoring and evaluation systems consider all aspects of the response management. Establish appropriate objectives and indicators at the design phase. 3.1 Putting a monitoring and evaluation system in place

9. Monitoring and Evaluation – Care Toolkit

Monitoring and Evaluation are the two management tools that help in keeping a control on the business activities as well as raising the level of performance. Monitoring refers to an organized process of overseeing and checking the activities undertaken in a project, to ascertain whether it is capable of achieving the planned results or not.

Difference Between Monitoring and Evaluation (with ...

Monitoring and evaluation usually include information on the cost of the programme being monitored or evaluated. This allows judging the benefits of a programme against its costs and identifying which intervention has the highest rate of return.

BASIC PRINCIPLES OF MONITORING AND EVALUATION

Monitoring Evaluation Timing Monitoring is a continuing Evaluation assesses the function that takes place entire project cycle. throughout the implementation of a project/programme. Depth and Monitoring is a regular part Evaluation reviews the purpose of project or programme

achievements of the project/ management.

What is monitoring?

Monitoring, evaluation, accountability, and learning (MEAL) are part of everyday programme management and are critical to the success of all programmes. MEAL technical quality is very important across a portfolio of projects.

Monitoring & Evaluating, Accountability and Learning ...

Weavers Triangle²The Weavers Triangle is a simple tool that can help you think about your project and do planning, monitoring and evaluation of your work. It can both help you develop your organisation's strategy and plans for its projects, as well as work out whether you are being successful in achieving what you set out to achieve.

MONITORING, EVALUATION AND LEARNING (MEL) GUIDE

Monitoring and Evaluating Natural Flood Management This tool has been built to support the monitoring and evaluation requirements for the 79 Defra-funded NFM catchment and community projects. Scroll down for an introduction to the monitoring and evaluation requirements and how to use this tool.

NFM Projects Monitoring and Evaluation Tool v2.501

Monitoring and Evaluation is used to assess the performance of projects, institutions and programmes set up by governments, international organisations and NGOs. Its goal is to improve current and future management of outputs, outcomes and impact. Monitoring is a continuous assessment of programmes based on early detailed information on the progress or delay of the ongoing assessed activities. An evaluation is an examination concerning the relevance, effectiveness, efficiency and impact of activ

Monitoring and evaluation - Wikipedia

In many organisations, "monitoring and evaluation" is something that that is seen as a donor requirement rather than a management tool. Donors are certainly entitled to know whether their money is being properly spent, and whether it is being well spent.

Monitoring and Evaluation - Civicus

Monitoring data is only useful if it is analysed and used to improve programme quality and quickly address any problems that emerge. The Monitoring and Evaluation Coordinator must ensure that all monitoring data collected is analysed and presented in a timely and user-friendly way. In doing so, the quality of information should also be considered.

This Handbook provides a comprehensive ten-step model that will help guide development practitioners through the process of designing and building a results-based monitoring and evaluation system.

File Type PDF Monitoring Evaluation A Management Tool

This manual explains the skills and steps for making a monitoring and evaluation system that functions well, organizing the people, processes and partnerships so that they collect and use good information that can be used by decision makers and other stakeholders.

In 1997, New York City adopted a mammoth watershed agreement to protect its drinking water and avoid filtration of its large upstate surface water supply. Shortly thereafter, the NRC began an analysis of the agreement's scientific validity. The resulting book finds New York City's watershed agreement to be a good template for proactive watershed management that, if properly implemented, will maintain high water quality. However, it cautions that the agreement is not a guarantee of permanent filtration avoidance because of changing regulations, uncertainties regarding pollution sources, advances in treatment technologies, and natural variations in watershed conditions. The book recommends that New York City place its highest priority on pathogenic microorganisms in the watershed and direct its resources toward improving methods for detecting pathogens, understanding pathogen transport and fate, and demonstrating that best management practices will remove pathogens. Other recommendations, which are broadly applicable to surface water supplies across the country, target buffer zones, stormwater management, water quality monitoring, and effluent trading.

This open access book provides an overview of the building blocks necessary for managing, steering and guiding the establishment of a research infrastructure (RI). It offers valuable insights into RI investment, access and management at the academic, grants management, agency and policy level, and serves as a useful guide for the research community, students, and those in the private sector wishing to understand the approaches and opportunities involved in the establishment, maintenance and management of research infrastructure platforms. Presenting a holistic view of RI investment and granting cycles from a South African perspective, the book's target audience includes those working in science diplomacy, policymaking and science grants councils (especially in Africa) as well as funders and donors.

This volume has been developed as a step-by-step guide for professionals involved in designing, implementing, monitoring and evaluating developmental interventions. It introduces and elucidates the key concepts and procedures involved, starting from the fundamentals of project design and management, the basics of monitoring and evaluation, and the development of a performance monitoring plan to different approaches to monitoring, choosing appropriate evaluation designs, approaches to evaluation, the analysis of monitoring and evaluation, and finally implementing this information in a project environment. In order to provide further context, the manual uses real project examples which help in buttressing the understanding of the readers and enable adoption of these practices in such projects.

This book is a contribution to the building of a knowledge base for the effectiveness of M&E-Systems in the field of development management. The primary focus is to contribute to the clarification of what rigorous frameworks would apply to understand and meaningfully measure M&E-System effectiveness. The book has the aim of translating outcomes from Dr. Ba's thesis research on M&E-System effectiveness into an actionable contribution to better reach development practitioners and managers. The book is mainly devoted to development managers and M&E experts who wish to find superior ways of managing M&E-Systems for improved decision-making and measured risk-taking in moving development policies and programs towards the greater freedom and welfare of people mainly in Africa. The book focuses on M&E-System effectiveness and how it influences the dynamic capabilities of

development organizations and institutions in managing development programs and projects. The book presents the challenges in seeking an effective M&E-System, examines the gaps and limits in assessing it, and finally proposes ways to rigorously measure its effectiveness. The book may also contribute to the scientific and professional discussions on what would be the meaningful framework to better understand the success factors that underlie an effective M&E-System and also how they help improve development management.

This volume offers a simple, systematic guide to creating a knowledge sharing practice in your organization. It shows how to build the enabling environment and develop the skills needed to capture and share knowledge gained from operational experiences to improve performance and scale-up successes. Its recommendations are grounded on the insights gained from the past seven years of collaboration between the World Bank and its clients around the world—ministries and national agencies operating in various sectors—who are working to strengthen their operations through robust knowledge sharing. While informed by the academic literature on knowledge management and organizational learning, this handbook's operational background and many real-world examples and tips provide a missing, practical foundation for public sector officials in developing countries and for development practitioners. However, though written with a public sector audience in mind, the overall concepts and approaches will also hold true for most organizations in the private sector and the developed world.

This open access book is a consolidation of lessons learnt and experiences gathered from our efforts to utilise Earth observation (EO) science and applications to address environmental challenges in the Hindu Kush Himalayan region. It includes a complete package of knowledge on service life cycles including multi-disciplinary topics and practically tested applications for the HKH. It comprises 19 chapters drawing from a decade's worth of experience gleaned over the course of our implementation of SERVIR-HKH – a joint initiative of NASA, USAID, and ICIMOD – to build capacity on using EO and geospatial technology for effective decision making in the region. The book highlights SERVIR's approaches to the design and delivery of information services – in agriculture and food security; land cover and land use change, and ecosystems; water resources and hydro-climatic disasters; and weather and climate services. It also touches upon multidisciplinary topics such as service planning; gender integration; user engagement; capacity building; communication; and monitoring, evaluation, and learning. We hope that this book will be a good reference document for professionals and practitioners working in remote sensing, geographic information systems, regional and spatial sciences, climate change, ecosystems, and environmental analysis. Furthermore, we are hopeful that policymakers, academics, and other informed audiences working in sustainable development and evaluation – beyond the wider SERVIR network and well as within it – will greatly benefit from what we share here on our applications, case studies, and documentation across cross-cutting topics.
