Food is as old as human civilization.

Mushrooms are superior to many vegetables and beans in their nutritive value. It is very rich in protein, vitamins and minerals. Fresh mushrooms contain about 85% water and 3.2% protein. But dried mushrooms water content is low and protein level is high as 34 to 44% and the fat content is less than 0.3%.

There are about 100 species of edible mushrooms all over the world. But only three of them are cultivated in India which are *Agaricus bisporus*, *Volvariella volvacea* and *pleurotus sajor caju*. Unfortunately, it is realized that mushrooms did not receive universal acceptance over the years since a number of naturally growing mushrooms are poisonous. Now the situation has been changed because the cultivated edible mushrooms are totally safe for human consumption. Mushroom cultivation fits in very well with sustainable farming and has several advantages: it uses agricultural waste

Important aspects that need to be addressed.

In this volume, experts examine the use of different technologies for food processing.

They look at technology with ways to preserve nutrients, eliminate anti-nutrients and toxins, add vitamins and minerals, reduce waste, and increase productivity.

Topics include, among others: •

- applications of ohmic heating
- cold plasma in food processing
- the role of biotechnology in the production of fermented foods and beverages
- the use of modification of food proteins using gamma irradiation
- edible coatings to restrain migration of moisture, oxygen, and carbon dioxide
- natural colorants, as opposed to synthetic coloring, which may have toxic effects
- hurdle technology in the food industry
- the unrecognized potential of agro-industrial waste

This book highlights the latest research on
