Dementia is the most significant health issue facing our aging population. With no cure to date, there is an urgent need for the development of interventions that can alleviate symptoms of dementia and ensure optimal well-being for people with dementia and their caregivers. There is accumulating evidence that music is a highly effective, non-pharmacological treatment for various symptoms of dementia at all stages of disease progression. In its various forms, music (as a medium for formal therapy or an informal activity) engages widespread brain regions, and in doing so, can promote numerous benefits, including triggering memories, enhancing relationships, affirming a sense of self, facilitating communication, reducing agitation, and alleviating depression and anxiety. This book outlines the current research and understanding of the use of music for people with dementia, from internationally

renowned experts in music therapy, music psychology, and clinical neuropsychology.

The dementia challenge is the largest health effort of the times we live in. The whole society has to move to a realization of the significance of prioritization to make an attempt in the direction of mental health promotion and dementia risk reduction. New priorities for research are needed to go far beyond the usual goal of constructing a disease course-modifying medication. Moreover, a full empowerment and engagement of men and women living with dementia and their caregivers, overcoming stigma and discrimination should be promoted. The common efforts and the final aim will have to be the progress of a "dementia-constructive" world, where people with dementia can take advantage of equal

opportunities.

For people with dementia, the world can become a lonely and isolated place. Music has long been a vital instrument in transcending cognitive issues; bringing people together, and allowing a person to live in the moment. Connecting through Music with People with Dementia explains how a caregiver can learn to use melody or rhythm to connect with someone who may be otherwise non-responsive, and how memories can be stimulated by music that resonates with a part of someone's past. This user-friendly book demonstrates how even simple sounds and movements can engage people with dementia, promoting relaxation and enjoyment. All that's needed to succeed is a love of music, and a desire to gain greater communication and more meaningful

behavioural problems like agitation in dementia patients? In my Matura paper I discussed the above-mentioned questions and verified the thesis that music therapy improves the well-being of people suffering from dementia and additionally helps to improve their social and motor skills. Even though dementia is an incurable disease, people suffering from dementia can really benefit from music therapy. Music therapy offers an opportunity for patients to improve their mood and overall well-being, even if only for a certain time. It has the aim to accompany dementia patients throughout their illness and give them the opportunity to reexperience happy feelings. Additionally, music therapy improves the patients' social behaviour such as gesturing, talking and smiling. After attending music therapy, patients are virtually always in a better mood and happier than they were before. The right choice of music in the

individual, and group factors shaping practice, and how songwriting is understood and practiced within different psychological and wellbeing orientations.

Within the last decade music therapists have developed their work with people who have life-threatening illnesses and with those who are dying. This book presents some of that work from music therapists working in different approaches, in different countries, showing how valuable the inclusion of music therapy in palliative care has already proved to be. It is important for the dying, or those with terminal illness, that approaches are used which integrate the physical, psychological, social and spiritual dimensions of their being. The contributors to this book emphasize the importance of working not only with the patient but with the ward situation,

friends and family members. By offering patients the chance to be creative they become something other than patients - they become expressive beings, and there is an intimacy in music therapy that is important for those who are suffering. Many of the contributors write in their own personal voice, providing a particular insight which will be valuable not only to other music therapists seeking to enrich their own ways of working, but to all those involved in caring for the sick and the dying. Contributors describe their work with both children and adults living with HIV/AIDS, cancer and other chronic degenerative diseases.

The use of music in therapeutic practice in Turkey and the surrounding geographical regions is not a new phenomenon. Until recently, however, the music therapy profession, as it is known in
