You could buy lead Naplan Paper 2013 or get it as soon as feasible.

This book investigates the localised effects of reform by exploring the impact of a school improvement policy agenda on the work of three experienced principals. It presents three longitudinal case studies within a shared specific leadership context in Queensland, Australia. The case studies enable an exploration of the way the principalship in this context has evolved over time, providing deep insights into the practices and beliefs of three experienced school leaders working in a period of rapid and urgent systemic reform. The nature of global reform policy borrowing means that the research and the findings within this monograph are relevant for international audiences. The book describes a new way to understand and theorise the effects of reform policies and associated pressures on school leaders. Using post-structural theory, it provides a better understanding of the specific effects of reform policy ensembles, particularly when combined with an analysis of the ways policy and discourse work together at a wider level to create an environment that disciplines the principalship. Further, it sheds lights on

the means of complying with or contesting policy influences and how the work of leaders has changed over time.

Over the last two decades, large-scale national, or provincial, standardised testing has become prominent in the schools of many countries around the globe. *National Testing in Schools: An Australian Assessment* draws on research to consider the nature of national testing and its multiple effects, including: media responses and constructions such as league tables of performance pressures within school systems and on schools effects on the work and identities of principals and teachers and impacts on the experience of schooling for many young people, including those least advantaged. Using Australia as the case site for global concerns regarding national testing, this book will be an invaluable companion for education researchers, teacher educators, teacher education students and teachers globally.

This book is designed for parents who want to help their children and for teachers who wish to prepare their class for the NAPLAN Literacy Tests. NAPLAN Tests are sat by Year 9 students Australia-wide. These tests are held in May every year.

Education issues feature almost daily in print media, online, on the radio and on television, much of which focuses on the perceived deficits of students and teachers. Singled out for special attention are low socio-economic status (SES) schools which are frequently characterised by teachers and students with little investment in learning and teaching. Yet within this plethora of educational discussion there is no contemporary, longitudinal study of what it means to learn and teach in a disadvantaged school within the policy context of the 'education revolution' in Australia. Drawing on 500 interviews conducted over a four period with the Principal, parents, teachers and students at a regional low SES school, this book challenges the profile of one school as represented on the 'My School' website which publishes the results of National Assessment Program in Literacy and Numeracy (NAPLAN). Chapters situate the original research within an international and national educational context, before exploring topics including leadership and management, student behaviour, constructs of the 'good teacher', the involvement of parents in school and the 'digital revolution'. The book closes with an appraisal of the major themes that emerged from the multiple perspectives of the study. This is the first book to provide a longitudinal ethnographic study of a school in Australia, which examines the impact of the 'education revolution' on the Principal, parents, teachers and students. It comprehensively challenges the official 'My School' representation of a low SES school and will appeal to researchers in education, as well as those involved in postgraduate teacher education and sociology courses, both from Australia and

internationally.

A Dingo Ate My Math Book presents ingenious, unusual, and beautiful nuggets of mathematics with a distinctly Australian flavor. It focuses, for example, on Australians' love of sports and gambling, and on Melbourne's iconic, mathematically inspired architecture. Written in a playful and humorous style, the book offers mathematical entertainment as well as a glimpse of Australian culture for the mathematically curious of all ages. This collection of engaging stories was extracted from the Maths Masters column that ran from 2007 to 2014 in Australia's Age newspaper. The maths masters in question are Burkard Polster and Marty Ross, two (immigrant) Aussie mathematicians, who each week would write about math in the news, providing a new look at old favorites, mathematical history, quirks of school mathematics—whatever took their fancy. All articles were written for a very general audience, with the intention of being as inviting as possible and assuming a minimum of mathematical background.

Data Culture and the Organisation of Teachers' Work provides an in-depth look at how the political and media scrutiny of teachers, pupils and schools now organises teaching and learning. Spina also examines how educational data is used in schools, and where it fails to take account of the everyday experiences of school leaders, teachers and students. Drawing on primary research, and discussing practice in relation to the National Assessment Programme: Literacy and Numeracy (NAPLAN), this book discusses the strengths and weaknesses of a data-driven approach, the restrictions this can impose and how to navigate them as a teacher. Ideal for scholars and postgraduate students of education, this book provides a comprehensive institutional, ethnographic look into the daily lived experiences of teachers, and the effects of standardised testing.

The National Report for 2013 on the National Assessment Program Literacy and Numeracy Achievement in Reading, Persuasive Writing, Language Conventions and Numeracy looked at the NAPLAN tests that were conducted, NAPLAN tests are equated so that the 2013 results can be compared with those for previous years. Equating enables the results from NAPLAN tests in different years to be reported on the same achievement scale. As with all statistical calculations, the NAPLAN statistics provided in this report include some degree of uncertainty and this should be considered when interpreting differences in jurisdictional and national average scores, and percentages at or above national minimum standards. NAPLAN results are publicly reported through the summary and national reports. Results are also available for use by jurisdictions, non-government school sectors and schools. [Introduction, ed]

Teacher-educator international professional development involves personal and professional, research-

and practice-oriented, and pragmatic and aesthetic growth. This text encourages teacher educators to explore this work as *Ren*, or benevolent human beings, in cultivating global professional communities. As faculties engage in *Ren* as a vital 21st century form of development, new insights may emerge for how to revive and apply this concept in our changing global society. This text begins by discussing evolving concepts of achievement in an era of globalization, contrasting comparative conquest with global notions of relational integrity. Evolving aspects of achievement in 21st century China are also included. The text goes on to explore aspects of 21st century teacher quality and professional development, before presenting a theoretical framework for the international professional development of teacher education faculties as a process of becoming professional individuals, research-based practitioners, and aesthetic engineers. Narrative inquiry, including the aesthetic approach employed in this text, is described as the research method used to explore the development of 15 faculty participants in this text's case study of one teacher education research center at a Chinese university. Findings from the author's two-year immersion at the research site involve three overarching "complementary contrasts," or "tensions held in balance," across the 15 faculties in this study. These tensions included harmonizing (1) community and individuality, (2) adaptability and expression, and (3) authority and compassion. The findings are discussed in light of the original theoretical framework for teacher-educator international professional development by integrating participant interviews, research publications, and further observations into current academic discourse. The text concludes by offering implications for teacher-education practice, research, and policy for China, and other countries including the U.S., and suggests how the findings connect to global academic discourses on teacher-educator professional development across international settings.

Highlighting marginalized but significant perspectives about the sociopolitical essence of English language tests and testing processes worldwide, this book explores the social considerations of testing theories and practices from a critical perspective. Investigating concerns surrounding power inequalities, *The Sociopolitics of English Language Testing* takes a socially-situated view of language assessment, bringing sociopolitical understandings of language teaching, learning, and assessment to the forefront in the field. Within the broader discussion of the politics of test use, an international team of language and education experts address the issues of ideology, diversity, power, and dominance in English language testing. Through socially-sensitive theoretical as well as empirical discussion and investigation of English language testing, this book offers valuable insights, not only to applied linguists and the language education community who have focused on positivistic and cognitively-oriented conceptions of language testing, but to anyone who wishes to venture beyond the traditional bounds of the field.
