Minimalism is an action- and task-oriented approach to instruction and documentation that emphasizes the importance of realistic activities and experiences for effective learning and information seeking. Since 1990, when the approach was defined in John Carroll's *The Nurnberg Funnel*, much work has been done to apply, refine, and broaden the minimalist approach to technical communication. This volume presents fourteen major contributions to the current theory and practice of minimalism. Contributors evaluate the development of minimalism up to now, analyze the acceptance of minimalism by the mainstream technical communications community, report on specific innovations and investigations, and discuss future challenges and directions. The book also includes an appendix containing a bibliography of published research and development work on minimalism since 1990. Contributors: Tricia Anson, R. John Brockmann, John M. Carroll, Steve Draper, David K. Farkas, JoAnn T. Hackos, Robert R. Johnson, Greg Kearsley, Barbara Mirel, Janice (Ginny) Redish, Stephanie Rosenbaum, Karl L. Smart, Hans van der Meij. Published in association with the Society for Technical Communication .

In forty-four original chapters, leading researchers and practitioners offer a state-of-the-art perspective on the evolving field of Human Performance Technology (HPT)--a study of technologies designed to enhance human performance and capabilities in the workplace. Tracing the historical roots of HPT,

this book explains its theoretical underpinnings, and unveils an array of models and techniques that have proven effective in enhancing individual and organizational performance.

After the death of her twin sister, Stephanie, in a yacht explosion, Sabrina continues to masquerade as her sister, until the possibility that Stephanie is still alive threatens to spiral her new life out of control

Java Programming: A Comprehensive Introduction is designed for an introductory programming course using Java. This text takes a logical approach to the presentation of core topics, moving step-by-step from the basics to more advanced material, with objects being introduced at the appropriate time. The book is divided into three parts: Part One covers the elements of the Java language and the fundamentals of programming. An introduction to object-oriented design is also included. Part Two introduces GUI (Graphical User Interface) programming using Swing. Part Three explores key aspects of Java's API (Application Programming Interface) library, including the Collections Framework and the concurrency API. Herb Schildt has written many successful programming books in Java, C++, C, and C#. His books have sold more than three million copies. Dale Skrien is a professor at Colby College with degrees from the University of Illinois-Champaign, the University of Washington, and St. Olaf College. He's also authored two books and is very active in SIGCSE.

Over the past few decades technological advances in transcriptomics, proteomics, metabolomics, and glycomics along with the ability to selectively knockout genes of interest has greatly advanced our understanding of maternal-conceptus interactions that are essential for the establishment and maintenance of a successful pregnancy. This knowledge provides a foundation from which to build research endeavors to help resolve infertility, embryonic loss and recurrent abortion in humans, captive wild animals and important farm species. The present volume on "Regulation of Implantation and Establishment of Pregnancy in Mammals" brings together current reviews from leading experts to address the diversity of mechanisms by which species establish and maintain pregnancy. Implantation in rodents, dogs, pigs, cattle, sheep, horses, primates, humans and embryonic diapause in wild species are discussed. Reviews will provide current knowledge on the role of endometrial steroid receptors, adhesion factors, cytokines, interferons, steroids, prostaglandins, growth factors and immune cells involved with regulation of conceptus development.

This holiday season, good little citizens should look under their Mandatory Seasonal Happiness Tree for The Mutant Experience by new recruit R. Eric Reuss. This 64-page sourcebook for all things mutant-y includes new cool powers (Speed, Pouches, Creeping Madness, Forgettable), new utterly useless powers and lots of setting information, style tips and tables. The Mutant Experience teaches Paranoia players how to spit acid, control gravity or light or magnetism, stretch, bounce, scream and emit a nauseating vapour. Who doesn't want that? Don't grow a second head without it!
