New York Times bestseller Dana Stabenow returns to her enormously popular Kate Shugak series with Whipser to the Blood Inside Alaska's biggest national park, around the town of Niniitna, a gold mining company has started buying up land. The residents of the Park are uneasy. "But gold is up to nine hundred dollars an ounce" is the refrain of Talia Macleod, the popular Alaskan skiing champ the company has hired to improve their relations with Alaskans and pave the way for the mine's expansion. And she promises much-needed jobs to the locals. But before she can make her way to every village in the area to present her case at town meetings and village breakfasts, there are two brutal murders, including that of a long-standing mine opponent. The investigation into those deaths falls to Trooper Jim Chopin and, as usual, he needs Kate to help him get to the heart of the matter. Between those deaths and a series of attacks on snowmobilers up the Kanuyaq River, not to mention the still-open homicide of Park villain Louis Deem last year, part-time P.I. and newly elected chairman of the Niniitna Native Association Kate Shugak has her hands very much full. Dana Stabenow's Kate Shugak series continues to be beloved among crime fiction fans, but also provides a fascinating window into life and death in Alaska.

This book provides an introduction to band theory and the electronic properties of materials at a level suitable for final-year undergraduates or first-year graduate students. It sets out to provide the vocabulary and quantum-mechanical training necessary to understand the electronic, optical and structural properties of the materials met in science and technology and describes some of the experimental techniques which are used to study band structure today. In order to leave space for recent developments, the Drude model and the introduction of quantum statistics are treated synoptically. However, Bloch's theorem and two tractable limits, a very weak periodic potential and the tight-binding model, are developed rigorously and in three dimensions. Having introduced the ideas of bands, effective masses and holes, semiconductor and metals are treated in some detail, along with the newer ideas of artificial structures such as super-lattices and quantum wells, layered organic substances and oxides. Some recent 'hot topics' in research are covered, e.g. the fractional Quantum Hall Effect and nano-devices, which can be understood using the techniques developed in the book. In illustrating examples of e.g. the de Haas-van Alphen effect, the book focuses on recent experimental data, showing that the field is a vibrant and exciting one. References to many recent review articles are provided, so that the student can conduct research into a chosen topic at a deeper level. Several appendices treating topics such as phonons and crystal structure make the book self-contained introduction to the fundamentals of band theory and electronic properties in condensed matter physic today.

The long-awaited companion piece to Derrick Jensen's immensely popular and highly acclaimed works A Language Older Than Words and The Culture of Make Believe. Accepting the increasingly widespread belief that industrialized culture inevitably erodes the natural world, Endgame sets out to explore how this relationship impels us towards a revolutionary and as-yet undiscovered shift in strategy. Building on a series of simple but increasingly provocative premises, Jensen leaves us hoping for what may be inevitable: a return to agrarian communal life via the disintegration of civilization itself.

Exhibitions for Social Justice assesses the state of curatorial work for social justice in the Americas and Europe today. Analyzing best practices and new curatorial work to support all those working on exhibitions, Gonzales expounds curatorial practices that lie at the nexus of contemporary museology and neurology. From sharing authority, to inspiring action and building solidarity, the book demonstrates how curators can make the most of visitors ' physical and mental experience of exhibitions. Drawing on ethnographic and archival work at over twenty institutions with nearly eighty museum professionals, as well as scholarship in the public humanities, visual culture, cultural studies, memory studies, and brain science, this project steps back from the detailed institutional histories of how exhibitions come to be. Instead, it builds a set of curatorial practices by examining the work behind the finished product in the gallery. Demonstrating that museums have the power to help our society become more hospitable, equitable, and sustainable, Exhibitions for Social Justice will be of interest to scholars and students of museum and heritage studies, gallery studies, arts and heritage management, and politics. It will also be valuable reading for museum professionals and anyone else working with exhibitions who is looking for guidance on how to ensure their work attains maximum impact.
