Clinical Nursing Education: Current Reflections was conceived as a unique resource for seasoned and novice faculty as well as for graduate students on the nurse educator track. The book aims to help the profession re-imagine clinical education, historically, the essential core of nursing education, and examine the impact of new models for clinical education in an increasingly complex environment of health care delivery. It also provides readers a variety of reflections on simulation, performance evaluation, student experiences, and faculty responsibilities related to these critical aspects of a nurse's education. The book grew out of the editors' experiences as part of the NLN's Task Group on Clinical Education, Blue Ribbon Panel on Research in Nursing Education, and Think Tank on Transforming Clinical Nursing Education.

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

While vast numbers of nurses across the globe contribute in all areas of healthcare delivery from primary care to acute and long-term care in community settings, there are significant differences in how they are educated, as well as the precise nature of their practice. This comprehensive handbook provides a research-informed and international perspective on the critical issues in contemporary nurse education. As an applied discipline, nursing is implemented differently depending on the social, political and cultural climate in any given context. These factors impact on education, as much as on practice, and are reflected in debates around the value of accredited programmes, and on-the-job training, apprenticeship, undergraduate and postgraduate pathways into nursing. Engaging with these debates amongst others, the authors collected here discuss how, through careful design and delivery of nursing curricula, nurses can be prepared to understand complex care processes, complex healthcare technologies, complex patient needs and responses to therapeutic interventions, and complex organizations. The book discusses historical perspectives on how nurses should be educated; contemporary issues facing educators; teaching and learning strategies; the politics of nurse education; education for advanced nursing practice; global approaches; and educating for the future. Bringing together leading authorities from across the world to reflect on past, present and future approaches to nurse education and nursing pedagogy, this handbook provides a cutting-edge overview for all educators, researchers and policy-makers concerned with nurse education.

The increase of online nursing education programs has furthered the need for nursing faculty to have specific preparation for online teaching. Drawing from the authors' extensive experience teaching online nursing education programs, Online Nursing Education: A Collaborative Approach is unlike any other text. It was written and designed for faculty teaching online post-licensure students in a nursing education degree program, post-master's certificate program, advanced practice program, or other advanced education-related degree program. This unique text takes a theoretical approach and includes practical examples as well as sample curriculum, course design, and policies. Topics covered include strategies for teaching online, learning through writing in an online classroom, experiential learning in online programs, generational differences in online learning, and more practical discussions backed by evaluation studies and qualitative research.
