Studienarbeit aus dem Jahr 2005 im Fachbereich Informatik - Wirtschaftsinformatik, Note: 1,3, Universität t Koblenz-Landau (Wirtschafts- und Verwaltungsinformatik), 21 Quellen im Literaturverzeichnis, Sprache: Deutsch, Abstract: Der Einsatz von integrierter Unternehmenssoftware wird mit der fortschreitenden Technisierung auch f ü r kleine und mittelst ä ndische Unternehmen immer wichtiger. Jedoch schrecken viele Unternehmen vor hohen Lizenzkosten etablierter Softwarehersteller zur ü ck und f ü r umfangreichere Individualis ö sungen ist meist kein ausreichendes Budget vorhanden. Mit Compiere existiert eine ERP/CRM Software, die als Open Source Projekt entwickelt und somit ohne Lizenzkosten genutzt werden kann. Compiere richtet sich an kleine und mittelst ä ndische Unternehmen in der Vertriebs- und Dienstleistungsbranche. Mit einer prozessorientierten Architektur bietet Compiere eine sehr flexible L ö sung, die jederzeit an Ver ä nderungen angepasst werden kann. Diese Arbeit er ö hrt die Konzepte in Compiere und geht auf die Frage ein, ob einem Open Source Projekt ü berhaupt die Verantwortung f ü r die Gesch ä ftprozesse eines Unternehmens ü bertragen werden kann. Ein besonderes Augenmerk soll auf die versprochenen CRM Komponenten in Compiere gelegt werden. Diese ist zwar vollst ä ndig integriert, bietet aber l ä ngst nicht alle Funktionalit ä ten, die man von einer CRM-L ö sung erwarten k ö nnte. Die Evaluierung von Compiere basiert in dieser Arbeit auf den Erfahrungen, welche bei der Realisierung eines Compiere-Systems in einem vordefinierten Szenario gemacht wurden. Diese Erfahrung hat gezeigt, dass Compiere einen sehr guten Ansatz f ü r ein ERP System darstellt, die CRM-Komponente allerdings noch sehr unterentwickelt ist. Die Architektur der Software aber bietet eine solide Grundlage f ü r die Erweiterung des Funktionsumfangs der Software, so dass Compiere eine ernst zu nehmende Konkurrenz zu Business One von SAP, Oracle ' s Small Business Suite oder Navision von Microsoft wird oder in einigen Bereichen schon ist.

Free/Open Source Enterprise Resource Planning systems (FOS-ERP) are gaining popularity and acceptance due to two main factors: their lack of licensing fees and customizability. Given this, organizations are able to easily adopt and manipulate these systems to meet their individual needs. Free and Open Source Enterprise Resource Planning: Systems and Strategies unites research on FOS-ERP, comparing differences with proprietary Enterprise Resource Planning products, and demonstrating key research factors. It includes cases demonstrating how small enterprises have benefited from FOS-ERP in Spain and in Belgium, along with difficulties encountered and solutions developed. This essential reference addresses key issues such as security and legal risks, as well as challenges, opportunities, and barriers to adoption.

Welcome to the 5th International Conference on Open Source Systems! It is quite an achievement to reach the five-year mark – that 's the sign of a successful enterprise. This annual conference is now being recognized as the primary event for the open source research community, attracting not only high-quality papers, but also building a community around a technical program, a collection of workshops, and (starting this year) a Doctoral Consortium. Reaching this milestone reflects the efforts of many people, including the conference founders, as well as the organizers and participants in the previous conferences. My task has been easy, and has been greatly aided by the hard work of Kevin Crowston and Cornelia Boldyreff, the Program Committee, as well as the Organizing Team led by Bj ö rn Lundstr ö m. All of us are also grateful to our attendees, especially in the difficult economic climate of 2009. We hope the participants found the conference valuable both for its technical content and for its personal networking opportunities. To me, it is interesting to look back over the past five years, not just at this conference, but at the development and acceptance of open source software. Since 2004, the business and commercial side of open source has grown enormously. At that time, there were only a handful of open source businesses, led by RedHat and its Linux distribution. Companies such as MySQL and iBos were still quite small.
