Top 10 Facts About Overpopulation in China China has the world's largest megalopolis – A region in China known as the Pearl River Delta houses nine major cities and administrative districts. The Pearl River Delta has a population of more than 105 million.

Essay from the year 2013 in the subject English - Miscellaneous, grade: 96 %, University of South Florida, language: English, abstract: In diesem englischsprachigem Aufsatz wird das Problem der Uberbevölkerung und der damit verbundenen Probleme dargestellt. Der Text wurde auf Fehler hin verbessert und hat die US-amerikanische Note "A" (96 %) erhalten."

This research was able to make some direct comparison and differences between Lagos state and Berlin. It also went further into the histories, politics and economies of both Lagos state and Berlin for in-depth understanding of these cities. Overpopulation has been a major challenge in Lagos state which has led to an unfavourable standard of living in the state such as the development of slums, congestion of people in a specific area, bad transportation means, lack of electricity, poor Housing, poverty, lack of adequate employment and many more. This Research was able to analyse the causes, problem and possible solutions of overpopulation in Lagos state as compared to Berlin which is a state in Federal republic of Germany. The causes of overpopulation in the state includes immigration, employment, infrastructural services, poverty, industrialisation, education, religion, rural-urban migration, market, fertility rate in Lagos and lack of skilled labour. While the problems of Overpopulation in the state includes urban decay, hunger, housing, lack of electricity, congestion, overcrowded schools, crime, High demands of goods, administration, beggars and urban planning. The possible solutions on how to curb this problem of overpopulation in the state could be corruption, agriculture, housing and greenery, transportation, urban planning, recycling, research institutes, job and electricity, re-grouping of industries, education, and sustainability. Finally, Recommendations were also offered on how to improve the existing conditions of both Lagos state and Berlin for adequate sustainable growth. Future generations to come will also benefit from these strategies.

Our present population is at least twice that sustainable with any degree of comfort. As a result the earth will be so ravaged by pollution, resource depletion, environmental destruction, global warming and climate change that we will be reduced to a subsistence existence, if not made extinct altogether. In Part I of the book the main threats we face are lucidly discussed, including overpopulation, excessive consumption, resource depletion, the energy crisis, pollution, nuclear power, global warming, climate change, environmental destruction, the evolution of new diseases, economic collapse, war and terrorism. In Part II some of the fundamental problems behind our perilous situation are examined, including incompetent leadership in politics and business, corrupt capitalism, globalization, megacities built around cars, 'junk' products and the promotional 'bullshit and brainwashing' used in religion, politics, business. Part III suggests that 'real democracy', ethical management, careful choice of objectives, and implementation of sustainable practices will help deal with the catastrophe facing us. Part IV uses detailed calculations to show that, unless we take action to deal with our critical situation, our population will be decimated and face the prospect of extinction.

There are many factors to be considered when examining the current state of environmental problems in the modern world. By addressing these causes, the preservation of ecosystems and environmental resources can be maintained. Environmental Issues Surrounding Human Overpopulation is an authoritative reference source for the latest scholarly research on the depletion of natural resources due to overpopulation and presents insights on how these environmental threats can be addressed. Highlighting technological, economic, and social perspectives, this book is ideally designed for policymakers, researchers, academics, students, and practitioners interested in better understanding the current state of the global environment.

Cover -- Half Title -- Title -- Copyright -- Dedication -- Contents -- Foreword: A Neglected Dimension of the Middle Eastern (and World) Dilemma -- Preface -- Acknowledgments -- ONE: Introduction: Talking about Demography in Israel -- TWO: Of Pollution, Paucity, and Population Pressures -- THREE: Of Impaired Public Services, Poverty, and Population Pressures -- FOUR: The Rise and Fall of Aliyah: A Brief History of Immigration to Israel -- FIVE: Blessed with Children: From Dogma to Subsidies -- SIX: Women's Reproductive Rights: Abortion, Birth Control, and Fertility Policies in Israel

This book is a compilation of what a neuropsychiatrist learned about the causes and cures of human diseases in his 41 year medical practice. I treated 25,000 of my fellows and wrote 1,000,000 Rx in the process. The book is divided into 51 Topics (chapters) and contains over 100 references. It serves as an historical review of the field of stress research as well as animal crowding research, as the two morphed together in my theory of "population density stress". Human overpopulation is a fact, as we have far exceeded the earth's carrying capacity for our species and mother nature is attempting to cull our numbers through our multitude of "diseases of civilization". Our hunter-gatherer contemporaries, living in their traditional manner in their clan social groups widely distributed in their ecosystem, have none of our diseases. As our extreme gene based altruism has brought us tremendous compassion and technological advances in caring for the diseases of our fellows, it has also brought us tremendous overpopulation and brought us near to ecological collapse. We must face our need to restrict our reproduction or mother nature will do it for us. A case in point: infertility in America has increased 100% in just 34 years, from 1982 to 2016. During the same period, our sperm counts have fallen 60%. No-one is willing to look at the obvious cause: neuro-endocrine inhibition of human reproduction resulting from population density stress. If any of this touches a nerve, please find the time in your busy, stressful day to stop for an hour and read this ground-breaking book. You may never have heard any of this information from any of your healthcare providers or the mass media. Big Pharma rules the minds of your healthcare providers and the mass media. At the end of my career as a practicing psychiatrist, I had become little more than a prescription writing machine and was actually instructed to "stop wasting time talking to your patients and just write their prescriptions". So, I retired and spent the next 5 years writing this book. I hope you find it as illuminating as I did doing the research on our epidemic of stress diseases. No wonder that we are ever more anxious and depressed, in spite of taking our 4,300,000,000 Rx every year! The real cure for our diseases of civilization must be a worldwide reduction in family size and a concerted effort to increase the opportunities for women to access education and work, as well as birth control. The alternative is increasing human disease and infertility from population density stress. Please read this book and tell me if you don't agree with my surprising conclusions. Good luck and God bless us one and all!

This first publication of the Research Group for European Migration Problems is devoted to the importance of migration in Western Europe. Small wonder that especially German social scientists, living in a country invaded by millions and millions of refugees and expellees from Central and Eastern Europe, are paying so much attention to the solution of regional andnationaloverpopulation. It is doubtful whether we can speak of European overpopulation in general. Dr Hilde Wander's investigations make it dear that from a European point of view short distance migration may solve many problems for which up to now overseas emigration to Canada, Australia, etc. seemed to be the only remedy. Those talking about European integration (there still is much than real action) should keep in more discussion on this topic mind that the only way out of the present system of frustrations consists in economic and social freedom, i.e. a free flow of goods, capital and migrating people. The Research Group for European Migration Problems is an international committee promoting the study of one of the crucial social problems, rather neglected so far: a more effective distribution and spreading of the European population.
