Zastava Pap Ak 47 Semi Auto Rifle Owner Manual Guide Book

Description: The Zastava M77 is a 7.62mm light machine gun developed and manufactured by Zastava Arms. The M77 is designed on the basis of the AK-47 rifles from the USSR. The rifle's action is operated by a long-stroke AK gas piston modified to handle the .308 cartridges. A 3-position gas adjustment ring, located behind the gas block, can be twisted to increase or decrease the level of pressure directed into the piston so that the rifle can cycle a variety of surplus and factory-fresh ...

As the first title in the new series, New Directions in Communication Disorders Research: Integrative Approaches, this volume discusses a unique phenomenon in cognitive science—single-word reading—which is an essential element in successful reading competence. Single-word reading is an interdisciplinary area of research that incorporates phonological, orthographic, graphemic, and semantic information in the representations suitable for the task demands of reading. Editors Elena L. Grigorenko and Adam J. Naples have organized a collection of essays written by an outstanding group of scholars in order to systematically sample research on this important topic, as well as to describe the research within different experimental paradigms. Single-Word Reading provides an introduction to unfamiliar areas of research, and is an inspiration for future study. The introductory chapter sets up a contextual stage for connections between spoken and written word processing, the stage-based nature of their development, and the role of education. Succeeding chapters address visual word processing; the role of morphology in word recognition; the role of lexical representation; the biological bases of single-word reading and related processes; and more. Reading researchers will take interest in this substantial book, as will professionals and practitioners linked to the teaching of reading in the departments of school psychology, special education, communication disorders, neuroscience, cognitive science, linguistics, and reading.

Fuzzy Sets and Systems

A consideration of China's Mount Emei, long important in Chinese culture and history and of particular significance to Buddhists.

Ceramics, Powders, Corrosion and Advanced Processing covers the proceedings of the Third International Union of Materials Research Societies (IUMRS) International Conference on Advanced Materials (ICAM), held in Sunshine City, Ikebukuro, Tokyo, Japan from August 31 to September 4, 1993. The said conference discusses the procedures for advanced materials. The book is divided into four parts. Part 1 includes topics such as preparation of powders from different compounds and substances and the application of different methods and techniques. Part 2 talks about high temperature oxidations and corrosions; degradation resistance of thermal barrier coatings; the environmental effects on corrosion behavior of stainless steel; effect of gas composition and pressure on high temperature corrosion; and other related concepts. Part 3 includes topics such as fatigue-crack behavior; the factors that lead to it; fracture resistance and how it is increased; and the application of ceramics to heat-resistant engines and turbines. Part 4 covers the advanced processing of ceramics, and Part 5 deals with the fabrication of silicon-based ceramics. The text is highly recommended for chemists and engineers in the field of ceramics who would like to know more about the advances in its studies and research.
