Have you always wanted to learn more about how roller coasters work? I'm not talking about the basic "roller coasters use gravity!" descriptions you're used to. I'm talking about learning in-depth about the nitty gritty engineering details, like: How do roller coaster engineers know what size motor is needed to pull the train to the top of the lift hill and how much will it cost to operate it? What material are the wheels made out of and how does it affect the performance of the ride? What is the difference between LIM and LSM propulsion? How does the control system on a racing or dueling coaster time up the near collision moments
