These past papers, which are made up of both questions and answers, are meant to give Grade 12 pupils a good idea of what the scope of the final examination will be, but are intended as a ...

This book is a companion to Reeds Vol. 6: Basic Electrotechnology for Marine Engineers and covers aspects of theory beyond the scope of Volume 6. The book will cover the more advanced topics in electrotechnology for professional trainees studying Merchant Navy Marine Engineering Certificates of Competency (CoC) as well as the syllabi in electrotechnology for undergraduates studying for BSc, BEng and MEng degrees in marine engineering and electrical engineering. The new edition will provide worked examples and test exam questions, corresponding to current Merchant Navy Qualifications. Other revisions will include new material on emerging technology areas such as image intensifiers (photoelectric effect, secondary emission), thermal imaging cameras, radar, increased maritime use of LEDs, various semiconductor physics devices including the laser, as well as discussions of binary or digital theory.

This book, first published in 1980, covers the employment of merchant seamen, principally from the perspective of a labour lawyer, but including a great deal of material not normally found in books on labour law. It also shows how the law is but one kind of rule; that the collective organisations of works and employers create and enforce rules of industrial practice that have just as important an effect on the lives of those they cover.
