Ron DiPippo, Professor
Emeritus at the University
of Massachusetts Dartmouth,
is a world-regarded
geothermal expert. This
single resource covers all
aspects of the utilization
of geothermal energy for
power generation from
fundamental scientific and

engineering principles. The thermodynamic basis for the design of geothermal power plants is at the heart of the book and readers are clearly guided on the process of designing and analysing the key types of geothermal energy conversion systems. Its practical emphasis is enhanced by the use of case studies from real plants that increase the reader's understanding of geothermal energy conversion and provide a unique compilation of hard-to-obtain data and experience. An important new chapter covers Environmental Impact and Abatement Technologies, including

gaseous and solid emissions; water, noise and thermal pollutions; land usage; disturbance of natural hydrothermal manifestations, habitats and vegetation; minimisation of CO₂ emissions and environmental impact assessment. The book is illustrated with over 240 photographs and drawings. Nine chapters include practice problems, with solutions, which enable the book to be used as a course text. Also includes a definitive worldwide compilation of every geothermal power plant that has operated, unit by unit, plus a concise primer on the applicable thermodynamics. *

Jeff Speck has dedicated his

career to determining what makes cities thrive. And he has boiled it down to one key factor: walkability. The very idea of a modern metropolis evokes visions of bustling sidewalks, vital mass transit, and a vibrant, pedestrian-friendly urban core. But in the typical American city, the car is still king, and downtown is a place that's easy to drive to but often not worth arriving at. Making walkability happen is relatively easy and cheap; seeing exactly what needs to be done is the trick. In this essential new book, Speck reveals the invisible workings of the city, how

simple decisions have cascading effects, and how we can all make the right choices for our communities. Bursting with sharp observations and real-world examples, giving key insight into what urban planners actually do and how places can and do change, Walkable City lays out a practical, necessary, and eminently achievable vision of how to make our normal American cities great again.

This book presents a systematic approach to the potential pulmonary complications of various systemic non-pulmonary pediatric disorders. Chapters focus on the pulmonary complications associated with: the major organ systems, types of disorders, metabolic conditions, and various modalities. Although specific diseases will be discussed, the main focus will be on describing the associated organ mechanisms and how they can negatively affect the respiratory system. Each chapter will also discuss methods of

This book is divided into four parts. In Part One the author considers the natural factors which have influenced the various national systems of education. They comprise racial, linguistic, geographical and economic factors. In Part Two he considers the contribution of religious traditions to education, more particularly those of the Catholic and Puritan faiths, and in Part Three the secular traditions of humanism, socialism and nationalism. Finally in Part Four a comparison is made of the systems of education in England and Wales, the USA, France and the Soviet Union.
