Americans are taught to believe that upward mobility is possible for anyone who is willing to work hard, regardless of their social status, yet it is often those from affluent backgrounds who land the best jobs. Pedigree takes readers behind the closed doors of top-tier investment banks, consulting firms, and law firms to reveal the truth about who really gets hired for the nation's highest-paying entry-level jobs, who doesn't, and why. Drawing on scores of in-depth interviews as well as firsthand observation of hiring practices at some of America's most prestigious firms, Lauren Rivera shows how, at every step of the hiring process, the ways that employers define and evaluate merit are strongly skewed to favor job applicants from economically privileged backgrounds. She reveals how decision makers draw from ideas about talent—what it is, what best signals it, and who does (and does not) have it—that are deeply rooted in social class. Displaying the "right stuff" that elite employers are looking for entails considerable amounts of economic, social, and cultural resources on the part of the applicants and their parents. Challenging our most cherished beliefs about college as a great equalizer and the job market as a level playing field, Pedigree exposes the class biases built into American notions about the best and the brightest, and shows how social status plays a significant role in determining who reaches the top of the economic ladder.

Annotation While this monograph is not about show dogs or cats, its statistical methods could be applied to tracing the pedigree of these species as well as humans. Thompson (U. of Washington) covers such topics as genetic models, population allele frequencies, kinship/inbreeding coefficients, and Monte Carlo estimation. Includes supporting tables and figures. Suitable as a supplementary text or primary text for advanced students. Lacks an index. c. Book News Inc.
