This book is a cumulation of a research program that began in the summer of 1978, when I was a doctoral student at the University of Missouri. What started as a graduate student's curiosity about individual differences in need for personal control led to a personality scale, a few publications, some additional questions, and additional research. For reasons I no longer recall, I named this personality trait desire for control. One study led to another, and questions by students and colleagues often spurred me to apply desire for control to new areas and new questions. At the same

time, researchers around the globe began using the scale and sending me reprints of articles and copies of papers describing work they had done on desire for control!. In the past decade or so, I have talked or corresponded with dozens of students who have used the scale in their doctoral dissertation and master's thesis research. I have heard of or seen translations of the Desirability of Control Scale into German, Polish, Japanese, and French. There is also a children's version of the scale. I estimate that there have now been more than a hundred studies conducted on desire for control!.

The only expectation one can have when returning to

visit a childhood home is to be deeply moved in the most unexpected ways. For millions of Americans each year, that journey conjures many emotions, offering a psychological exploration unlike any other. This book describes the experiences of adults who visit a childhood home and the psychology behind their visits. Seeing the buildings, schools, parks and playgrounds from their past helps to establish the psychological and emotional link between the child in the old photographs and the person they are today.

Burger lead a team of leading scholars as they explore a variety of topics within social influence, seamlessly incorporating a range of analyses (including intrapersonal, interpersonal, and intragroup), and examine critical theories and the role of social influence in applied settings today.

This unique workbook was written for the undergraduate Personality course where professors are looking for activities to help students learn and apply personality theories to real-life examples. The workbook is geared toward personality courses that are theories-based, as opposed to research-based. Because the cases explored are those based on

normal behavior (as opposed to abnormal behavior), this workbook is especially useful. While most personality texts present the major concepts of personality theories, they don't help students apply the theories they have learned or to use the theories to understand other examples on their own. This workbook will help students do just that and is the perfect complement to any Personality text.

or no prior course work in statistics. The authors teach students to solve problems encountered in research projects, to make decisions based on data in general settings both within and beyond the university setting, and to become critical readers of statistical analyses in research papers and in news reports. The first eleven chapters present material typically covered in an introductory statistics course, as well as case studies and examples that are often encountered in undergraduate capstone courses. The remaining chapters cover regression modeling and design of experiments.
