Sustained-Release Injectable Products focuses on the development process for sustained-release versions of drugs and delivery systems and administration routes. From the rationale and basic product development principles to regulatory issues and the approval process, expert contributions address virtually every aspect. They bring together common threads that apply to any sustained-release formulation, such as scale-up, safety, biocompatibility, analytical challenges, and quality assurance.

No other area of regulatory compliance receives more attention and scrutiny by regulatory authorities than the regulation of sterile products, for obvious reasons. With the increasing number of potent products, particularly the new line of small protein products, joining the long list of proven sterile products, the technology of manufacturing ster

The fourth edition of this authoritative text covers every aspect of liver disease affecting infants, children and adolescents. As in the previous editions, it offers an integrative approach to the science and clinical practice of pediatric hepatology and charts the substantial progress in understanding and treating these diseases. All of the chapters are written by international experts and address the unique pathophysiology, manifestations and management of these disorders. This edition of the landmark text features extended coverage of viral hepatitis, metabolic liver disease, fatty liver disease and liver transplantation, including a new chapter on post-transplant care and outcomes. All of the chapters have been updated to reflect changing epidemiology and recent advances in molecular medicine and genomics. With the continued evolution of pediatric hepatology as a discipline, this text remains an essential reference for all physicians involved in the care of children with liver disease.

Children's palliative care has developed rapidly as a discipline, as health care professionals recognise that the principles of adult palliative care may not always be applicable to children at the end of life. The unique needs of dying children are particularly evident across Africa, where the scale of the problem is overwhelming and the figures so enormous that they are barely comprehensible. Written by a group with wide experience of caring for dying children in Africa, this book provides practical, realistic guidance on improving access to, and delivery of, palliative care in this demanding setting. It looks at the themes common to palliative care - including communication, assessment, symptom management, psychosocial issues, ethical dilemmas, end of life care, and tips for the professional on compassion and conservation of energy - but always retains the focus on the particular needs of the health care professional in Africa. Whilst containing some theory, the emphasis is on practical action throughout. It will provide health care professionals working in Africa, and other resource-poor settings, with the confidence, knowledge, and capacity to improve care for the terminally ill child in constrained and demanding environments.

An extremely practical text, this new edition of Diseases of the Liver and Biliary System in Children covers the essentials of paediatric hepatology. The range of material is wide and has been revised and updated to include the latest advances. Many helpful algorithms and tables

are included and the references at the end of each chapter have been carefully selected so as to provide the most up-to-date information available. A concluding section comprising some 100 carefully annotated plates, completes this text. Containing the contributions of 23 internationally acclaimed authorities, active both clinically and in research, the book provides an essential guide to the diagnosis and management of paediatric liver diseases, both common and uncommon for all those involved in the care of the child with liver disease. Diseases of the Liver and Biliary System in Children has become THE REFERENCE of choice for the paediatric gastroenterologist, hepatologist and surgeon.
