As a child I knew Malcolm, who was then a young man. Dad often invited him home for meals. Malcolm was one of the ‘lost children’ forgotten or abandoned by their families. We followed his story from childhood to adulthood as best we could even after he was eventually discharged back into the community. When considering the tragedy and abuse of Malcolm’s wasted earlier years, it is a story of immeasurable sadness. Yet he ultimately rose above it all, and with admirable strength, courage and innate resilience, was finally able to free ‘the regular boy within’ as he had always wanted. I was raised within the community of the Seaciff Mental Hospital village so it was difficult to know where fiction ended and the greater truth took over. To separate the truths from the almost-truths at this stage would be an impossible task as many of those concerned have died. Therefore I have blended together various stories as representative of our family and friends’ combined belief of what most probably did happen during the period covered. Wherever possible, I’ve used correct dates, names and places. When there is doubt I’ve changed names and details for the protection of those still living. This is Malcolm’s story as I believe it unfolded.

A moving and atmospheric debut about love and language set in modern-day Shanghai

First published in 1995, Routledge is an imprint of Taylor & Francis, an informa company.

Organized geographically, Unnatural Phenomena: A Guide to the Bizarre Wonders of North America explores the history of natural phenomena in virtually every U.S. state.

Richard Semon was a German evolutionary biologist who wrote, during the first decade of the twentieth century, two fascinating analyses of the workings of human memory which were ahead of their time. Although these have been virtually unknown to modern researchers, Semon’s work has been rediscovered during the past two decades and has begun to have an influence on the field. This book not only examines Semon’s contribution to memory research, but also tells the story of an extraordinary life set against the background of a turbulent period in European history and major developments in science and evolutionary theory. The resulting book is an engaging blend of biographical, historical and psychological material.

Mankind is constantly facing different challenges in our dynamically changing world. What we pretty much need is cooperation and alliance to overcome the problems we have to face. Our conflicts of interest and ideological opposition have to be put aside. Without a wide-scale social alliance we will not be able to find the answers to the questions that have properly arisen because of our irresponsible behavior. In the Middle Ages natural resources were so abundantly available that mankind’s needs were pretty easily met. We had to do nothing else than to cut out of nature everything we happened to need in a specific moment of time. Mankind snatched the opportunity but did not really chew the cud. They took away what they wanted. Nevertheless, with the onset of the industrial revolution, the rules of the game started to change. The energy output of the machines reached higher and higher levels, but at the same time, the rate of charge they exerted on the environment had also uninterruptedly increased. We opted for an “elegant” solution. We just simply hushed up the problem. For a long time, the protection of the environment had been a disregarded marginal field ignored completely by the political powers. Nevertheless, the environmental catastrophes warned us to take action in a very short while, but the fire extinguishing might have started too late; hence the operation of some of the energy-supplying systems produced an immense economic benefit for several lobby groups. Petrol, natural gas, and other common yet not really efficient sources of energy, which at the same time have had a deleterious influence on the environment, are constantly dwindling away. Fuel prices reach the stars. If we see a temporary price decrease, we take a deep breath. Nonetheless, this is nothing other than the end game. Remarkable changes are to come. If this does not happen or is delayed, a global catastrophe is expected to come. When might this downturn happen? What other sources can replace the petrol? For the moment, no one can answer these questions. Could anyone? According to some thinking the progress of history is not linear but cyclic. Many of the ideas had been born many centuries or even many millenniums ago in the heads of certain persons. Some of them put their ideas even on paper, or others might have built them. Who were they? If someone comes up with an idea that differs pretty much from the ordinary ones of his era, he cannot really be optimistic about a warm welcome. He is looked at as a weirdo at most. In the worst case he is burnt at the stake because of not having accepted the traditions. It is actually not worth going too far. In the past, the ones who were asking too many questions had to face the ecclesiastical or secular powers, whereas today these are replaced by the petroleum lobby. However, the end result is the same, unfortunately: a rented parcel in a quiet graveyard. Documents and experimental utensils are disappearing or are destroyed practically as a routine. Certain academic circles are declaring that “the idea is pure fantasy; this cannot be true because it contradicts the laws of nature!” Of course, they forget to mention what they exactly mean about “laws of nature” since “nature” or “universe” are boundless notions the full comprehension and mapping of which is impossible. Making use of our rules and laws we manage to get access to those parts about which we confidently state that we have managed to understand. Can we, however, talk about real comprehension? All our rules are based on semblances and simplifications. We want to humanize something that is totally independent of us. We overestimate our role. We abuse nature instead of serving it. Some recognized this problem in Hungary and abroad as well.

Today, as age-old certainties crumble in men’s hands, it is natural to ask, “What is the truth behind those strange, half-forgotten tales that seem forever recurring, those facts which, if substantiated, would change our conception of the universe?” Are there ghosts, sea serpents, messages from Mars? Have there been phantom armies? Was there a lost continent of Atlantis? Can men wander along the dimension of time? What of the tales that cluster around this thing called dying? Each of the 15 chapters in Forgotten Mysteries covers a different type of mysterious occurrence. For the first time the whole field of the enigmatical has been presented in one volume. “One of the world’s foremost authorities on psychic phenomena.”—United Press “...enormously readable...”—The Chicago Daily News “This book is in a class by itself.”—San Francisco Call Bulletin “...a fascinating book...”—Vincent Starrett, Chicago Tribune “Tales to keep you awake...Miller focuses the eye of the scientist upon the outre, evoking case histories rather than dungeons, facts rather than ghostly moans.”—Edwin Fadiman, Jr., Philadelphia Inquirer
