PHILOSOPHY OF MIND. " Philosophy of mind is an incredibly active field thanks in part to the recent explosion of work in the sciences of the mind. Jaworski ' s book is a well-written, comprehensive, and sophisticated primer on all the live positions on the mind–body problem, including various kinds of physicalism, emergentism, and his own favorite, hylomorphism. This is a serious and responsible book for philosophy students, philosophers, and mind scientists who want to understand where they stand philosophically. " Owen Flanagan, Duke University  
Philosophy of Mind introduces readers to one of the liveliest fields in contemporary philosophy by discussing mind–body problems and the range of solutions to them: varieties of substance dualism, physicalism, dual-attribute theory, neutral monism, idealism, and hylomorphism. It treats each position fairly, in greater depth and detail than competing texts, and is written throughout in a clear, accessible style that is easy to read, free of technical jargon, and presupposes no prior knowledge of philosophy of mind. The result is a balanced overview of the entire field that enables students and instructors to grasp the essential arguments and jump immediately into current debates. William Jaworski discusses the impact of neuroscience, biology, psychology, and cognitive science on mind–body debates. Bibliographic essays at the end of each chapter bring readers up to speed on the latest literature and allow the text to be used in conjunction with primary sources. Numerous diagrams and illustrations help newcomers grasp the more complex ideas, and chapters on free will and the philosophy of persons make the book a flexible teaching tool for general philosophy courses in addition to courses in philosophy of mind.

This book explores a range of issues in the philosophy of mind, with the mind-body problem as the main focus. It serves as a stimulus to the reader to engage with the problems of the mind and try to come to terms with them, and examines Descartes's mind-body dualism.

William Jaworski shows how hylomorphism can be used to solve mind-body problems--the question of how thought, feeling, perception, and other mental phenomena fit into the physical world. Hylomorphism claims that structure is a basic ontological and explanatory principle, and is responsible for individuals being the kinds of things they are, and having the powers or capacities they have. From a hylomorphic perspective, mind-body problems are byproducts of a worldview that rejects structure, and which lacks a basic principle which distinguishes the parts of the physical universe that can think, feel, and perceive from those that can't. Without such a principle,the existence of those powers in the physical world can start to look inexplicable and mysterious. But if mental phenomena are structural phenomena then they are uncontroversially part of the physical world. Hylomorphism thus provides an elegant way of solving mind-body problems.

This book, based on Jaegwon Kim's 1996 Townsend Lectures, presents the philosopher's current views on a variety of issues in the metaphysics of the mind--in particular, the mind-body problem, mental causation, and reductionism. This book, based on Jaegwon Kim's 1996 Townsend Lectures, presents the philosopher's current views on a variety of issues in the metaphysics of the mind--in particular, the mind-body problem, mental causation, and reductionism. Kim construes the mind-body problem as that of finding a place for the mind in a world that is fundamentally physical. Among other points, he redefines the roles of supervenience and emergence in the discussion of the mind-body problem. Arguing that various contemporary accounts of mental causation are inadequate, he offers his own partially reductionist solution on the basis of a novel model of reduction. Retaining the informal tone of the lecture format, the book is clear yet sophisticated.

The philosophy of perception investigates the nature of our sensory experiences and their relation to reality. Raising questions about the conscious character of perceptual experiences, how they enable us to acquire knowledge of the world in which we live, and what exactly it is we are aware of when we hallucinate or dream, the philosophy of perception is a growing area of interest in metaphysics, epistemology, and philosophy of mind. William Fish ' s Philosophy of Perception introduces the subject thematically, setting out the major theories of perception together with their motivations and attendant problems. While providing historical background to debates in the field, this comprehensive overview focuses on recent presentations and defenses of the different theories, and looks beyond visual perception to take into account the role of other senses. Topics covered include: the phenomenal principle perception and hallucination perception and content sense-data, adverbialism and idealism disjunctivism and relationalism intentionalism and combined theories the nature of content veridicality perception and empirical science non-visual perception. With summaries and suggested further reading at the end of each chapter, this is an ideal introduction to the philosophy of perception.

A lucid and wide-ranging introduction suitable for readers with a basic grounding in philosophy.

Philosophy of Mind: A Contemporary Introduction is a comprehensive and accessible survey of main themes, positions and debates in philosophy of mind. John Heil introduces and discusses the major topics in succinct, user-friendly, self-contained chapters: " Cartesian dualism " Descartes's legacy " non-Cartesian dualism " behaviorism " the identity theory " functionalism " the representational theory of mind " qualia " radical interpretation " the intentional stance " eliminativism " property dualism " mind and metaphysics " the mind's place in nature  
This revised and updated edition includes expanded chapters on eliminativism, qualia, and the representational theory of mind, and an entirely new chapter on property dualism. There are annotated suggestions for further reading at the end of each chapter, updated to include recent material and internet resources.

This is Philosophy of Mind presents students of philosophy with an accessible introduction to the core issues related to the philosophy of mind. Includes issues related to the mind-body problem, artificial intelligence, free will, the nature of consciousness, and more Written to be accessible to philosophy students early in their studies Features supplemental online resources on www.thisisphilosophy.com and a frequently updated companion blog, at http://tipom.blogspot.com

Are humans composed of a body and a nonmaterial mind or soul, or are we purely physical beings? Opinion is sharply divided over this issue. In this clear and concise book, Nancy Murphy argues for a physicalist account, but one that does not diminish traditional views of humans as rational, moral, and capable of relating to God. This position is motivated not only by developments in science and philosophy, but also by biblical studies and Christian theology. The reader is invited to appreciate the ways in which organisms are more than the sum of their parts. That higher human capacities such as morality, free will, and religious awareness emerge from our neurobiological complexity and develop through our relation to others, to our cultural inheritance, and, most importantly, to God. Murphy addresses the questions of human uniqueness, religious experience, and personal identity before and after bodily resurrection.

Philosophy of Mind: The Basics is a concise and engaging introduction to the fundamental philosophical questions and theories about the mind. The author Amy Kind, a leading expert in the field, examines central issues concerning the nature of consciousness, thought, and emotion. The book addresses key questions such as: What is the nature of the mind? What is the relationship between the mind and the brain? Can machines have minds? How will future technology impact the mind? With a glossary of key terms and suggestions for further reading, Philosophy of Mind: The Basics is an ideal starting point for anyone seeking a lively and accessible introduction to the rich and complex study of philosophy of mind.
