This reference guide provides pilots with a quick and easy access to most points concerning flying in a modern aircraft. The items are listed in alphabetical order and there is a comprehensive index and the most complete list of currently-used aeronautical abbreviations ever published. The book includes everything that a student pilot, a qualified PPL or a career pilot training towards a CPL or IR will need.

Organised and written as an accessible study guide for student pilots wishing to take commercial ground examinations to obtain ATPL or CPL licenses, Principles of Flight for Pilots also provides a reliable up-to-date reference for qualified and experienced personnel wishing to further improve their understanding of the Principles of Flight and related subjects. Providing a unique aerodynamics reference tool, unlike any book previously Principles of Flight for Pilots explains in significant depth all the topics necessary to pass the Principles of Flight examination as required by the EASA syllabus. Aviation ground instructor Peter J. Swatton, well reputed for his previous works in the field of pilot ground training, presents the subject in seven parts including basic aerodynamics; level flight aerodynamics; stability; manoeuvre aerodynamics; and other aerodynamic considerations. Each chapter includes self-assessed questions, 848 in total spread over eighteen chapters, with solutions provided at the end of the book containing full calculations and explanations.

the knowledge gap between your airline's operating manual and the airplane's operating manual all in one handy volume. It fits in your flight bag easily and you can refresh your valuable ATPL knowledge while away from home. It explains one main subject area on one spread double page with the text on the left and all relevant graphics on the right side. The table of contents enables a quick start to the desired subject areas or specific topics.

This review guide is designed as a quick reference guide or radio communications training self study guide. This covers VFR & IFR radio communications. Build your confidence by knowing what to say and when. Designed to fit in your flight bag.

Each guide in this comprehensive series covers the fundamentals of flying and the principal characteristics of a specific type of aircraft, gathered from the advice and experiences of leading experts in the aviation industry. Geared for pilots interested in renting or buying a particular model, these sourcebooks provide an overview of the aircraft and detailed descriptions of its handling characteristics, limitations, and performance data. A history of each airplane's use and function is also included.

This reference work, the most complete guide to aired and unaired television pilot films ever published (or made available in any way), contains 5,190 alphabetically arranged programs, each with storyline information, performer and character cast listings, producers, air dates (where applicable), genre, and network or cable association. Also included are the unaired versions of pilots that became a series (like 90 Bristol Court, Hazel, The Middle and Perfect Strangers) and the updates of aired series that were never telecast (e.g., The Robinsons: Lost in Space, the 1997 version of Hawaii Five-0, the 2011 Wonder Woman and the 2001 Electra Woman and Dyna Girl).

For each of the 650,000 pilots and air traffic controllers in the USA who must pass regular FAA medical exams, this reference explains every detail of the examination -- how to prepare for it, why it is required, and how to attain certification in spite of disability or illness. Far more than merely a guide to passing the test, this resource includes chapters providing advice on subjects ranging from altitude hypoxia to avoiding jet lag, from airline drug screening programs to flying after scuba diving. Interspersed throughout the text are pertinent historical and contemporary examples -- from the Red Baron to the September 11 terrorists -- to highlight a broad scope of problems. With humour and insight, this book deftly blends care for the pilot with care for the aircraft.
