Step 1: A problem involving work can be solved using the formula $\frac{1}{T} = \frac{1}{A} + \frac{1}{B}$, where T = time working together, A = the time for person A working alone, and B = the time for person B working alone. In this case, one pipe is filling the pool and the other is emptying the pool so we get the equation: Step 2: Solve the equation created in the first step.

"Work" Problems: Two Persons. Example: Peter can mow the lawn in 40 minutes and John can mow the lawn in 60 minutes. How long will it take for them to mow the lawn together? Solution: Step 1: Assign variables: Let x = time to mow lawn together. Step 2: Use the formula: Step 3: Solve the equation The LCM of 40 and 60 is 120 Multiply both sides with 120

It is possible to solve word problems when two people are doing a work job together by solving systems of equations. To solve a work word problem, multiply the hourly rate of the two people working together by the time spent working to get the total amount of time spent on the job.

Knowledge of solving systems of equations is necessary to solve these types of problems.

Problem 4 A farming field can be ploughed by 6 tractors in 4 days. When 6 tractors work together, each of them ploughs 120 hectares a day. If two of the tractors were moved to another field, then the remaining 4 tractors could plough the same field in 5 days. How many hectares a day would one tractor plough then? Click to see solution

It's inevitable—at almost any workplace you will run into “problem” coworkers. Some of these types of problematic coworkers include the negative coworker, the overly competitive co-worker, the gossip, the bully, and the person who pushes off work. Hopefully, your office doesn't have too many of these types of people, but if it does here's how to—almost, anyway—deal with working ...

Problems We Want Solved Dec 20, 2016 by Collaborative Team. Billions of people wake up every day trying to solve the world's problems. It's an amazing thing. But the world is still filled with problems. Some are extreme (climate change, terrorism), some are just annoying (traffic, storage). We back entrepreneurs tackling these problems.

eliability and safety are fundamental attributes of any modern technological system. To achieve this, diverse types of protection barriers are placed as safeguards from the hazard posed by the operation of the system, within a multiple-barrier design concept. These barriers are intended to protect the system from failures of any of its elements, hardware, software, human and organizational. Correspondingly, the quantification of the probability of failure of the system and its protective barriers, through reliability and risk analyses, becomes a primary task in both the system design and operation phases. This exercise book serves as a complementary tool supporting the methodology concepts introduced in the books "An introduction to the basics of reliability and risk analysis" and "Computational methods for reliability and risk analysis" by Enrico Zio, in that it gives an opportunity to familiarize with the applications of classical and advanced techniques of reliability and risk analysis. This book is also available as a set with Computational Methods for Reliability and Risk Analysis and An Introduction to the Basics of Reliability and Risk Analysis.
