Papers is a collection, as its subtitle intimates, of midlife meditations and musings toward a poetics (the creation of a language in this case) and a celebration of writing in depth psychology during the author's graduate work as a doctoral student. Essays, presentations, literature and film reviews make up this collection. It is a book for students of depth psychology and readers interested in following the trace of a depth psychology student's trajectory, for each chapter contains comments from journals and personal reminiscences and reflections. Though produced with an eye toward encouraging depth psychology students (particularly at the author's alma mater and erstwhile soror mystica), *The Pacifica*

How can we best describe the processes by which we visually perceive our environment? Contemporary perceptual theory still lacks a coherent theoretical position that encompasses both the limitations on the information that can be retained from a single eye fixation and the abundant phenomenal and behavioural evidence for the perception of an extended and coherent world. As a result, many

leading theorists and researchers in visual perception are turning with new or renewed interest to the work of Julian Hochberg. For over 50 years, in his own experimental research, in his detailed consideration of examples drawn from a wide range of visual experiences and activities, and most of all in his brilliant and sophisticated theoretical analyses, Hochberg has persistently engaged with the myriad problems inherent in working out the kind of coherent theoretical position the field currently lacks. The complexity of his thought and the wide range of areas into which Hochberg has pursued the solution to this central problem have, however, limited both the accessibility of his work and the appreciation of his

accomplishment. In this volume we seek to bring the full range of Hochberg's work to the attention of a wider audience by offering a selection of his key works, many taken from out-of-print or relatively inaccessible sources. To facilitate the understanding of his accomplishment, and of what his work has to offer to contemporary researchers and theorists in visual perception, we include commentaries on salient aspects of his work by 20 noted researchers. In the *Mind's Eye* will be of interest to researchers working on topics such as perceptual organisation, visual attention, space perception, motion perception, visual cognition, the relationship between perception and action, picture perception, and film, who are striving

to obtain a deeper understanding of their own fields, and who want to integrate this understanding into a broader, unified view of visual perceptual processing.

""I have known Professor Newton Malony for more than forty years. I have great respect for the way his mind works and the wise positions he takes. He is at once stimulating and creative, historically thorough and futuristically insightful. application of religious principles to clinical practice and research. He is capable, like few others, of bridging professional differences and arriving at reasonable conclusions." --Allen E. Bergin, Professor of Psychology, retired; coauthor, *Spiritual Strategy for Counseling and Psychotherapy* ""For Newton Malony, psychology exists in the service of religion. With the histories of the Christian church and psychology as his backdrop, Malony holds fast to his religious values throughout this book, making a case for the relevance of Christianity to a broad range of issues in clinical psychology." --Gordon Nagayama-Hall, Professor of Psychology, University of Oregon; author, *Multicultural Psychology* ""Newton Malony was a major force in

This edited volume is derived from a conference held in honor of Charles Hulin's contribution to the psychology of work. His research has carefully developed and tested theory related to job satisfaction, withdrawal from work, and sexual harassment. Edited by Hulin's students, *The Psychology of Work* discusses research in job satisfaction. This research shows that job satisfaction plays an essential role in theories of organizational behavior. Formal models are used, such as item response theory, structural equation modeling, and computational models. Three general and consistent themes in Hulin's research are represented in this book's chapters. The first theme is a focus on broad,

general constructs, such as job satisfaction. The virtue of this approach is that a wide range of behavior can be explained by a small number of variables. The second theme involves the examination of the antecedents and consequences of job satisfaction. This theme is increasingly important because it ties research on job attitudes and job behaviors where links are consistently found to social attitudes and behaviors where links are rarely found. The third theme consists of Hulin's interest in the use of formal models to characterize and understand behavior. This volume will be of interest to scholars and students in industrial/organizational psychology, human resources, organizational behavior, and management.
