Co-production and co-creation occur when citizens participate actively in delivering and designing the services they receive. It has come increasingly onto the agenda of policymakers, as interest in citizen participation has more generally soared. Expectations are high and it is regarded as a possible solution to the public sector's decreased legitimacy and dwindling resources, by accessing more of society's capacities. In addition, it is

seen as part of a more general drive to reinvigorate voluntary participation and strengthen social cohesion in an increasingly fragmented and individualized society. "Co-Production and Co-Creation: Engaging Citizens in Public Services" offers a systematic and comprehensive theoretical and empirical examination of the concepts of co-production and co-creation and their application in practice. It shows the latest state of knowledge on the topic and will be of interest both to students at an advanced level, academics and reflective practitioners. It addresses the topics with regard to co-production and co-creation and will be of interest to researchers, academics, policymakers, and students in the fields of public administration, business administration, economics, political

As Human Resource Development (HRD) research has developed, a growing variety of quantitative and qualitative data collection procedures and analysis techniques have been adopted; research designs now include mono, multiple and mixed methods. This Hand

Since the early 1980s, researchers and practitioners in the organisational and management fields have presumed a link between organisational, or corporate, culture and organisational performance. Whilst many believe this exists, other authors have been critical of the validity of such studies. Part of this doubt stems from a reliance on measures of organisational performance that are based purely on

financial measures of business growth. Using the construction industry as the subject of his research, Vaughan Coffey traces the development of the literature on organisational culture and business effectiveness and investigates the culture-performance link using a new and highly objective measure of company performance and an evaluation of organisational culture, which is largely behaviourally-based. Providing a theoretical contribution to the field, this work shows that various cultural traits appear to be closely linked to objectively measured organisational effectiveness. This book will be valuable to professionals and researchers in the fields of management and public policy. It indicates directions for construction companies to develop and change, and in doing so strengthen their

chances of remaining strong when opportunities for work might deplete and only the most successful companies will be able to survive.

The focus of this edited volume is to identify challenges facing organizations in achieving zero greenhouse gas emissions by 2050 and a new energy economy, and to explore solutions from various sectors of the economy to enable the transition to a zero emissions future. Research presented here is divided into three parts, with an introductory statement on growth and sustainability. Part one discusses strategies towards a sustainable economy under a zero emissions goal. Part two contains industry specific case studies focusing

on construction and related activities.

Part three is devoted to country specific case studies from the Asia-Pacific region. Each of the chapters address one or more of the following issues: restoration, mitigation, adaptation and/or promoting resilience in the face of climate change as part of achieving a sustainable economy. The volume is multi-disciplinary in nature, drawing on various disciplines in social science, business, environment and policy, and will be of interest to UN development agencies, academic institutions, government policy makers, NGOs and business leaders.

Companies and destinations in the tourism sector are confronted with increasing managerial challenges and have to deal with a competitive, turbulent, and fast-changing

environment. The understanding that both tourism companies and destinations endowed with the best assets (natural and cultural) cannot survive the escalating international competition without good managerial practices, has provided significant momentum for the development of the disciplinary field of tourism management in the last three decades. This volume recognizes the relevance of travel, tourism, and tourism activities as major economic drivers in the contemporary global economy, with a specific focus on performance, strategies, and sustainability. It is the collective intellectual effort of a number of international scholars, who cultivate original research on tourism management from a variety of theoretical perspectives. Together,
