Far from the vision of popular actors in the popular economy as reactionary and archaic, stubbornly resisting any move towards change, this book's overall aim is to contribute to a broadening and deepening of our understanding of the logic and socio-economic practices of those operating in the informal economy. It focuses on the vulnerabilities of these participants, resulting from high exposure to different risks combined with low social protection, and on the interactions between vulnerability and poverty. It considers security of livelihoods as the guiding principle for multiple practices in the informal economy. Thirteen studies, based on careful analyses of empirical data in different contexts in Africa, Latin America, and Asia, contribute to this multidisciplinary discussion. This book describes how people develop their own strategies to solve their problems through the use of interpersonal networks, associations, and other community-based arrangements. Moreover, it shows that informal economy actors systematically reposition themselves vis-à-vis the State, markets, international, and national policies with the aim of enhancing their economic and social security, and they may do this either individually or collectively. The book emphasizes how adaptability of the informal economy can be influenced by such factors as the macroeconomic context, access to financial, technological, and information resources, infrastructure, social protection schemes, and the institutional environment within which adaptations occur. Case studies stress the need to reformulate questions relating to policy intervention based on a more thorough understanding of the perspective of informal economy actors.

With its focus on critical thinking and applied learning, Doing Social Research provides a unique approach to conducting social research. The Delphi Technique in Nursing and Health Research is a practical guide to using the Delphi methodology for students and researchers in nursing and health. It adopts a logical step-by-step approach, introducing the researcher to the Delphi, outlining its development, analysing key characteristics and parameters for its successful use and exploring its applications in nursing and health. The book addresses issues of methodology, design, framing the research question, sampling, instrumentation, methodological rigour, reliability and validity, and methods of data analysis. The Delphi Technique in Nursing and Health Research enables the reader to be aware of the limitations of the technique and possible solutions, to design a Delphi questionnaire for each of the different rounds of a study, to consider different approaches to the technique in relation to a study, to analyse the data from each round of a Delphi study, and to understand the importance of feedback between rounds. Key Features A practical guide to facilitate use of the Delphi technique Provides the reader with the necessary information to participate in and conduct Delphi studies Examines different types of Delphi, including the e-Delphi, and modifications made to the technique Includes examples of real empirical investigations, brief case scenarios and key learning points for each chapter Explores the role of the Delphi researcher Explores ethical issues and issues of anonymity, use of experts and controlled feedback

A new and updated definitive resource for survey questionnaire testing and evaluation Building on the success of the first Questionnaire Development, Evaluation, and Testing (QDET) conference in 2002, this book brings together leading papers from the Second International Conference on Questionnaire Design, Development, Evaluation, and Testing (QDET2) held in 2016. The volume assesses the current state of the art and science of QDET; examines the importance of methodological attention to the questionnaire in the present world of information collection; and ponders how the QDET field can anticipate new trends and directions as information needs and data collection methods continue to evolve. Featuring contributions from international experts in survey methodology, Advances in Questionnaire Design, Development, Evaluation and Testing includes latest insights on question characteristics, usability testing, web probing, and other pretesting approaches, as well as: Recent developments in the design and evaluation of digital and self-administered surveys Strategies for comparing and combining questionnaire evaluation methods Approaches for cross-cultural and cross-national questionnaire development New data sources and methodological innovations during the last 15 years Case studies and practical applications Advances in Questionnaire Design, Development, Evaluation and Testing serves as a forum to prepare researchers to meet the next generation of challenges, making it an excellent resource for researchers and practitioners in government, academia, and the private sector.

Distance Learning is for leaders, practitioners, and decision makers in the fields of distance learning, e'learning, telecommunications, and related areas. Reflective practice is an important skill for students learning to teach in the lifelong learning sector. This book makes the case for reflective practice in post-compulsory teaching and shows how it can be used to support teachers in coping with the complexities and contingencies of practice. The book introduces a basic model of reflective practice and then explores several further models relevant to teaching in the lifelong learning sector, offering guidance on the application of each model in practice. Collaborative approaches to reflective practice are also discussed, and the place of reflective practice in teachers continuing professional development is carefully examined. Other key features of the book include: Clear links with the professional standards for teachers in the lifelong learning sector Discussion of the challenges and issues when engaging in reflection on practice Coverage of action research, often considered an extension of reflective practice Illustrations drawn from the authors' extensive experience in teaching and enabling learning Reflective Practice for Teaching in Lifelong Learning has been written to address the needs of student teachers across a whole range of lifelong learning courses.
