This Semester-In-Residence paper presents the development of a policy for record retention and destruction for a county in California. The goal of this project was to research, develop, and implement a record retention and destruction policy that fit the needs of a government entity. It involved an extensive research into what was involved with producing a complex policy. A risk assessment was conducted that identified the internal hazards, along with a risk assessment matrix. The next step was to conduct an audit of all the county's data and organize data according to the compliance objective within HIPAA, SOX or GLBA. To examine these compliance objectives it was necessary to research state and federal laws and regulations to find all the county's compliance requirements. I learned about the different destruction methods for each type of data. An invaluable lesson was learning how it all ties into NIST 800-53. The policy developed for the county will one day be ratified by the members of the board of supervisors. In order to create this policy, it was necessary to research state and federal laws and regulations. It is important to understand the different methods of destruction and the which of those are methods are appropriate for our purposes. Most important was a comprehensive data survey which identified and classified data according to use and content, which was then used to map data objects to compliance requirements.
