The Byzantine period in North Africa was a point of convergence for three different conceptions of Church governance: the imperial administration was aiming to exercise full control over the ecclesiastical hierarchy, the popes were intent on treating African bishops as suffragans, whereas the bishops, them selves, were most eager to preserve the autonomous and conciliar character of their Church. Conflicts were also always in the offing as a result of deep theological differences: the African clergy was Latin speaking and very determined to defend strict Chalcedonian orthodoxy, whereas the emperors sometimes proposed more compromising solutions in the many Christological debates. Dramatic events, such as the Vandal and Berber wars, the Three Chapters quarrel, the Monothelete crisis and the Arab invasions, inevitably have been more prominent in the annals of history, however, the history of the Church in Byzantine Africa was written not only in the dust of galloping cavalry squadrons and in the clamor of mutual anathemas in Christological quarrels. The proceedings and canons of the councils, the exchange of and canons of the concils, the exange of letters with Rome and Constantinople, and imperial rescripts have provided us with some valuable insights into the everyday problems of the African Church, and especially into the concerns that preoccupied her higher clergy. We saw long disputes over episcopal precedence and arguments over the issue of clerical appeals. Questions concerning matters of ecclesiastical propriety and the admittance of former heretics and schismatics into the clergy have been examined.

The Subject Electrical Design Estimating And Costing Covers An Important Functional Area Of An Electrical Diploma Holder. The Subject Is Taught In Various Forms In Different States. In Some States, It Is Covered Under Two Subjects, Namely, Electrical Design & Drawing And Electrical Estimating & Costing. In Some States It Is Taught As An Integrated Subject But Is Split Into Two Or Three Parts To Be Taught In Different Semesters.To Cater To The Needs Of Polytechnics Of Different States, The Content Of The Course Has Been Developed By Consulting The Curricula Of Various State Boards Of Technical Education In The Country. In Addition To Inclusion Of Conventional Topics, A Chapter On Motor Control Circuits Has Been Included In This Book. This Topic Is Of Direct Relevance To The Needs Of Industries And, As Such, Finds Prominent Place In The Curricula Of Most Of The States Of India. The Book Covers Topics Like Symbols And Standards, Design Of Light And Fan Circuits, Alarm Circuits, Panel Boards Etc. Design Of Electrical Installations For Residential And Commercial Buildings As Well As Small Industries Has Been Dealt With In Detail. In Addition, Design Of Overhead And Underground Transmission And Distribution Lines, Sub-Stations And Design Of Illumination Schemes Have Also Been Included.The Book Contains A Chapter On Motor Circuit Design And A Chapter On Design Of Small Transformers And Chokes. The Book Contains Theoretical Explanations Wherever Required. A Large Number Of Solved Examples Have Been Given To Help Students Understand The Subject Better. The Authors Have Built Up The Course From Simple To Complex And From Known To Unknown. Examples Have Generally Been Taken From Practical Situations. Indeed, Students Will Find This Book Useful Not Only For Passing Examinations But Even More During Their Professional Career.

Originally published under the title, The Book of the Villiers Engine, by C. Grange. This re-print of the 1956 tenth edition has been updated with the inclusion of the 1959 supplement from the eleventh edition, the remainder of the engine type information being identical in all respects in both editions.

Electronics explained in one volume, using both theoretical and practical applications. Mike Tooley provides all the information required to get to grips with the fundamentals of electronics, detailing the underpinning knowledge necessary to appreciate the operation of a wide range of electronic circuits, including amplifiers, logic circuits, power supplies and oscillators. The 5th edition includes an additional chapter showing how a wide range of useful electronic applications can be developed in conjunction with the increasingly popular Arduino microcontroller, as well as a new section on batteries for use in electronic equipment and some additional/updated student assignments. The book's content is matched to the latest pre-degree level courses (from Level 2 up to, and including, Foundation Degree and HND), making this an invaluable reference text for all study levels, and its broad coverage is combined with practical case studies based in real-world engineering contexts. In addition, each chapter includes a practical investigation designed to reinforce learning and provide a basis for further practical work. A companion website at http://www.key2electronics.com offers the reader a set of spreadsheet design tools that can be used to simplify circuit calculations, as well as circuit models and templates that will enable virtual simulation of circuits in the book. These are accompanied by online self-test multiple choice questions for each chapter with automatic marking, to enable students to continually monitor their own progress and understanding. A bank of online questions for lecturers to set as assignments is also available.

POWER OF THE BLOOD WORLD Revised and Updated! Child of the Night is book 1 of a 4 vampire-novel series that throbs with danger, treachery, betrayal, cruelty and dark, sultry romance. In a world where the undead are wary of and competitive and view humans as only prey, amazingly, three Blooddrinkers from different eras and cultures are able to form relationships. But change breeds more change as their individual stories unfold, blending and escalating, adding pieces until the horrifying picture becomes clear: both species are in danger of extinction! Book 1 – CHILD OF THE NIGHT André is a cold predator and Carol, a human woman with nothing to lose, becomes his preferred prey. In the blink of an eye, things alter for the better,—and then for the worse. Change can be deadly, especially for a mortal who now realizes she does have something to lose!
