The annual Going Romance conference is the major European discussion forum for theoretically relevant research on Romance languages where current ideas about language in general and about Romance languages in particular are tested. Starting with the thirteenth conference held in 1999, volumes with selected papers of the conferences are published under the title Romance Languages and Linguistic Theory. This is the fifth such volume, containing a selection of papers that have been presented at the seventeenth Going Romance conference, held at the Radboud University Nijmegen (The Netherlands) from 20–22 November 2003. The three-day program included a workshop on " Diachronic Phonology " . The present volume contains a broad range of articles dealing not only with syntax and phonology, but also with morphology, semantics and acquisition of the Romance languages.

The Oxford Guide to the Romance Languages is the most exhaustive treatment of the Romance languages available today. Leading international scholars adopt a variety of theoretical frameworks and approaches to offer a detailed structural examination of all the individual Romance varieties and Romance-speaking areas, including standard, non-standard, dialectal, and regional varieties of the Old and New Worlds. The book also offers a comprehensive comparative account of major topics, issues, and case studies across different areas of the grammar of the Romance languages. The volume is organized into 10 thematic parts: Parts 1 and 2 deal with the making of the Romance languages and their typology and classification, respectively; Part 3 is devoted to individual structural overviews of Romance languages, dialects, and linguistic areas, while Part 4 provides comparative overviews of Romance phonology, morphology, syntax, semantics and pragmatics, and sociolinguistics. Chapters in Parts 5-9 examine issues in Romance phonology, morphology, syntax, syntax and semantics, and pragmatics and discourse, respectively, while the final part contains case studies of topics in the nominal group, verbal group, and the clause. The book will be an essential resource for both Romance specialists and everyone with an interest in Indo-European and comparative linguistics.

"At the beginning of the third decade of the twenty-first century, the Latino minority, the nation's biggest and fastest growing, is at a crossroads. Is assimilation taking place in ways comparable to previous immigrant groups? Are the links to the original countries of origin being redefined in an age of contested globalism? How are Latinos changing America and how is America chanting Latinos? The growth of Latino Studies as a discipline, which seeks to understand these questions and others, is one of the most exciting phenomena in the humanities in the last few decades. This collection of twenty-three essays and a conversation by leading and emerging scholars assesses the current state of the discipline, and contains chapters on the Chicano Movement, gender and race relations, changes in demographics, the tension between rural and urban communities, immigration, the legacy of colonialism, language identity and the controversy surrounding Spanglish, and meditations on popular culture and the lasting power of literature"--
