This book examines the international law of forcible intervention in civil wars, in particular the role of party-consent in affecting the legality of such intervention. In modern international law, it is a near consensus that no state can use force against another - the main exceptions being self-defence and actions mandated by a UN Security Council resolution. However, one more potential exception exists: forcible intervention undertaken upon the invitation or consent of a government, seeking assistance in confronting armed opposition groups within its territory. Although the latter exception is of increasing importance, the numerous questions it raises have received scant attention in the current body of literature. This volume fills this gap by analyzing the consent-exception in a wide context, and attempting to delineate its limits, including cases in which government consent power is not only negated, but might be transferred to opposition groups. The book also discusses the concept of consensual intervention in contemporary international law, in juxtaposition to traditional legal doctrines. It traces the

development of law in this context by drawing from historical examples such as the Spanish Civil War, as well as recent cases such those of the Democratic Republic of the Congo, Somalia, Libya, and Syria. This book will be of much interest to students of international law, civil wars, the Responsibility to Protect, war and conflict studies, and IR in general.

The term 'urbicide' became popular during the 1992-95 Bosnian war as a way of referring to widespread and deliberate destruction of the urban environment. Coined by writers on urban development in America, urbicide captures the sense that the widespread and deliberate destruction of buildings is a distinct form of violence. Using Martin Heidegger's notion of space and Jean-Luc Nancy's idea of community, Martin Coward outlines a theoretical understanding of the urban condition at stake in such violence. He contends that buildings are targeted because they make possible a plural public space that is contrary to the political aims of ethnic-nationalist regimes. Illustrated with reference to several post-Cold War conflicts – including Bosnia, Chechnya and Israel/Palestine – this book is the first comprehensive analysis of organised violence against urban environments. It offers an original perspective to those seeking to better understand urbanity, political violence and the politics of exclusion.

Civil – military cooperation has always been a key factor in both peace and conflict situations, and is vital in today's political climate. This indispensable volume analyzes the various types of civil – military cooperation across different settings and contexts, to include humanitarian operations such as emergency relief following tsunami, earthquakes and refugee crises, as well as stability and reconstruction operations such as those in Afghanistan and the Democratic Republic of Congo. The book contains contributions from both senior academics and practitioners such as military officers and humanitarian personnel and discusses the benefits and logistics of civil – military cooperation. It closes with recommendations that will be of value to both academics and practitioners, making it a must read for anyone interested or involved in these operations.

Every year, the U.S. Army must select from an applicant pool in the hundreds of thousands to meet annual enlistment targets, currently numbering in the tens of thousands of new soldiers. A critical component of the selection process for enlisted service members is the formal assessments administered to applicants to determine their performance potential. Attrition for the U.S. military is hugely expensive. Every recruit that does not make it through basic training or beyond a first enlistment costs hundreds of thousands of dollars. Academic and other professional settings suffer similar losses when the wrong individuals are accepted into the wrong schools and programs or jobs and companies. Picking the right people from the start is becoming increasingly important in today's economy and in response to the growing numbers of applicants. Beyond cognitive tests of ability, what other attributes should selectors be considering to know whether an individual has the talent and the capability to perform as well as the mental and psychological drive to succeed? *Measuring Human Capabilities: An Agenda for Basic Research on the Assessment of Individual and Group Performance Potential for Military Accession* examines promising emerging theoretical, technological, and statistical advances that could provide scientifically valid new approaches and measurement capabilities to assess human capability. This report considers the basic research necessary to maximize the efficiency, accuracy, and effective use of human capability measures in the military's selection and initial occupational assignment process. The research recommendations of *Measuring Human Capabilities* will identify ways to supplement the Army's enlisted soldier accession system with additional predictors of individual and collective performance. Although the primary audience for this report is the U.S. military, this book will be of interest to researchers of psychometrics, personnel selection and testing, team dynamics, cognitive ability, and measurement methods and technologies.

Professionals interested in of the foundational science behind academic testing, job selection, and human resources management will also find this report of interest.

This book demonstrates how Clausewitzian thought influenced American strategic thinking between the Vietnam War and the current conflict in Iraq. Carl von Clausewitz's thought played a part in the process of military reform and the transition in US policy that took place after the Vietnam War. By the time of the 1991 Gulf War, American policy makers demonstrated that they understood the Clausewitzian notion of utilizing military force to fulfil a clear political objective. The US armed forces bridged the operational and strategic levels during that conflict in accordance with Clausewitz ' s conviction that war plans should be tailored to fulfil a political objective. With the end of the Cold War, and an increasing predilection for technological solutions, American policy makers and the military moved away from Clausewitz. It was only the events of 11 September 2001 that reminded Americans of his intrinsic value. However, while many aspects of the ' War on Terror ' and the conflict in Iraq can be accommodated within the Clausewitzian paradigm, the lack of a clear policy for countering insurgency in Iraq suggests that the US may have returned full circle to the flawed strategic approach evident in Vietnam. Clausewitz and America will be of great interest to students of strategy, military history, international security and US politics.

This volume develops information strategy as a construct equal in importance to military strategy as an influential tool of statecraft. John Arquilla and Douglas A. Borer explore three principal themes: the rise of the ' information domain ' and information strategy as an equal partner alongside traditional military strategy the need to consider the organizational implications of information strategy the realm of what has been called ' information operations ' (IO) - the building blocks of information strategy - has been too narrowly depicted and must be both broadened and deepened. Information Strategy and Warfare will be essential reading for students and practitioners of information strategy, as well as scholars of security studies and military strategy in general.

This title addresses the most important aspect of anaesthetic training - learning in the operating suite. The information is clearly presented and can be easily incorporated into the practice of clinical anaesthesia. The practical guidance provided, from organising the department, assessing competence, teaching practical procedures or organising simulator sessions, is based on many years of experience. There are chapters devoted to the issues of portfolio-based training and the use of mentoring and appraisal. The place, and effective use, of medical simulation, either low fidelity systems in local hospitals or the high fidelity centres in major educational units, is clarified by an international team of experts.

Civil-Military Cooperation (CIMIC) is the relationship between militaries and humanitarians. Largely conducted in post-conflict environments, CIMIC has become a key characteristic of military operations in the twenty-first century. However, the field is mostly understood through stereotype rather than clear, comprehensive analysis. The range and scope of activities which fall under the wider rubric of CIMIC is huge, as are the number of differing approaches, across situations and national armed forces. This book demonstrates the wide variety of national approaches to CIMIC activities, introducing some theoretical and ethical considerations into a field that has largely been bereft of this type of debate. Containing several case studies of recent CIMIC (in the Balkans, Afghanistan, and Iraq) along with theoretical analyses, it will assist scholars, practitioners, and decision-makers become more aware of the 'state of the art' in this field. Civil-Military Cooperation in Post-Conflict Operations will be of much interest to all students of military studies, humanitarian operations, peace operations and security studies in general.

This book explores the ideas of key thinkers and media practitioners who have examined images and icons of war and terror. *Icons of War and Terror* explores theories of iconic images of war and terror, not as received pieties but as challenging uncertainties; in doing so, it engages with both critical discourse and conventional image-making. The authors draw on these theories to re-investigate the media/global context of some of the most iconic representations of war and terror in the international 'risk society'. Among these photojournalistic images are: Nick Ut's Pulitzer Prize winning photograph of a naked girl, Kim Phuc, running burned from a napalm attack in Vietnam in June 1972; a quintessential 'ethnic cleansing' image of massacred Kosovar Albanian villagers at Racak on January 15, 1999, which finally propelled a hesitant Western alliance into the first of the 'new humanitarian wars'; Luis Simco's photograph of marine James Blake Miller, 'the Marlboro Man', at Fallujah, Iraq, 2004; the iconic toppling of the World Trade Centre towers in New York by planes on September 11, 2001; and the 'Falling Man' icon – one of the most controversial images of 9/11; the image of one of the authors of this book, as close-up victim of the 7/7 terrorist attack on London, which the media quickly labelled iconic. This book will be of great interest to students of media and war, sociology, communications studies, cultural studies, terrorism studies and security studies in general.
