NASA Announces Virtual Webb STEAM Day Event for Students, Educators

"Webb is a revolutionary mission on par with the Apollo, space shuttle, and Hubble missions – one ... Webb program interns, and a special episode of NASA STEM Stars. Recordings of the day's ...

K-8 science education in California (as in many other parts of the country) is in a state of crisis. K-8 students in California spend too little time studying science, many of their teachers are not well prepared in the subject, and the support system for science instruction has deteriorated. A proliferation of overly detailed standards and poorly conceived assessments has trivialized science education. And all these problems are likely to intensify: an ongoing fiscal crisis in the state threatens further cutbacks, teacher and administrator layoffs, and less money for professional development. A convocation held on April 29-30, 2009, sought to confront the crisis in California science education, particularly at the kindergarten through eighth grade level. The convocation, summarized in this volume, brought together key stakeholders in the science education system to enable and facilitate an exploration of ways to more effectively, efficiently, and collectively support, sustain, and communicate across the state concerning promising research and practices in K-8 science education and how such programs can be nurtured by communities of stakeholders.

This technical report on the National Association of Educational Progress (NAEP) 1996 State Assessment Program in Science provides an overview of the design, implementation and analysis of the educational assessment including details of sampling design, field administration, preliminary data analysis, and reporting of state results. This report also provides details on the background of the development of the 1996 instrument for science, sample design and selection, state and school cooperation, processing and scoring assessment materials, creation of the database and database products, weighting procedures and variance estimation, theoretical background and philosophy of NAEP scaling procedures, data analysis and scaling for the science assessment program, and conventions used in reporting the results.
