'Scottish Education' is a frank and authoritative commentary on every aspect of education in Scotland. It provides detailed information on pre-school, primary, secondary and tertiary education.

In this newly revised edition of Understanding Research in Early Education, Margaret Clark demonstrates the continuing relevance of research in the homes of young children and in preschool units. Through rigorous yet understandable language, the text stresses the importance of research, acknowledging how easy it can be, amidst the change and flood of documents on early education and care, to overlook the insights to be gained from past research. The author draws on her own studies, and those of others, to illustrate how to avoid common pitfalls, ask the right questions to inform students' research projects, and critically apply findings in the classroom or nursery. The book is one of the few texts for students to bring research alive, analysing key research to consider its limitations and the extent to which results are relevant to policy and practice. Without requiring any prior expertise in research and research methodologies, the third edition will prove invaluable for undergraduate and postgraduate students taking courses in early years' education, and practitioners undertaking continuing professional development. New content includes: fully revised chapters, an updated reference list, and a new chapter discussing current research on baseline assessment.

Why does Britain and its former colonies send children to school as young as four and five, when in eighty-eight per cent of the world the starting age is six or seven? Sue Palmer, author of bestselling Toxic Childhood, uncovers the truth: it's not because of what's best for children, but historical accident and economics. Palmer examines research ranging from neurological science to educational data, and shows that under-sevens gain most - educationally, physically, socially and psychologically -- from not being stuck behind a desk. Upstart puts forward a passionate case for Britain adopting a proper 'kindergarten' stage that recognises what under-sevens really need. With clarity, ease and vigour, Palmer describes a different way of doing early years education that would have huge benefits both for individual children, and for our nation.

Education in Scotland is markedly different from what happens in the rest of the UK - with a different National Curriculum, school boards to oversee school management and a General Teaching Council which has been in existence since 1965. Whilst there are many examples of successful and innovative practice in Scotland, the system is quite often not recognised as different by writers who talk about the UK education system as if it were one smooth whole. This book describes recent developments in both legislation and practice in Scotland, drawing comparisons with the English system. Chapters cover: \* administration and management \* the professional competence of teachers \* early years education provision \* the 'National Curriculum' in Scotland \* Secondary Education \* Special Educational Needs

This Handbook considers the myths and untruths that currently exist in international development and education. Using historic and contemporary evidence, this compendium redefines the international development narrative through a new understanding of &

An Anthology of Educational Thinkers provides an excellent introduction to the major groups of educational thinkers. Each thinker's views and theories are explained in detail in a format that is accessible to those currently practising and those who are still in training. However, this book goes beyond just explaining the theory, it shows practitioners how to put these theories into practice! It is filled with explanations of how theories are linked to the EYFS, examples of how these figures worked and, most importantly, demonstrates the way they influenced how most early years practitioners work today.

Flexible, effective and creative primary school teachers require subject knowledge, an understanding of their pupils and how they learn, a range of strategies for managing behaviour and organising environments for learning, and the ability to respond to dynamic classroom situations. This third edition of Learning to Teach in the Primary School is fully updated with reference to the new National Curriculum, and has been revised to provide even more practical advice and guidance to trainee primary teachers. Twenty-two new authors have been involved and connections are now made to Northern Irish, Welsh and Scottish policies. In addition, five new units have been included on: making the most of your placement play and exploration in learning behaviour management special educational needs phonics. With Masters-level reflective tasks and suggestions for research-based further reading, the book provides valuable support to trainee teachers engaged in learning through school-based experience and through reading, discussion and reflections as part of a teacher education course. It provides an accessible and engaging introduction to knowledge about teaching and learning that every student teacher needs to acquire in order to gain qualified teacher status (QTS). This comprehensive textbook is essential reading for all students training to be primary school teachers, including those on undergraduate teacher training courses (BEd, BA with QTS, BSc with QTS), postgraduate teacher training courses (PGCE, SCITT) and employment-based teacher training courses (Schools Direct, Teach First), plus those studying Education Studies. This textbook is supported by a free companion website with additional resources for instructors and students and can be accessed at www.routledge.com/cw/Cremien.

Taking a broader and more holistic approach to early childhood than previous studies, this book provides a comparative analysis of major policy developments and issues in 12 OECD countries, highlights innovative approaches, and proposes policy options that can be adapted to varied country contexts.
