This statutory guidance on injunctions to prevent gang-related violence draws on the experience and knowledge of the police service, local authorities and a wide range of local partners involved in dealing with violent gangs. It has been developed and approved by partners across the Criminal Justice System, as well as local practitioners. It has been produced after consultation with the Lord Chief Justice and the Master of the Rolls, and has been laid before Parliament by the Home Secretary. The Policing and Crime Act 2009 contains provision for injunctions to prevent gang-related violence to be sought against an individual; these were commenced in January 2011. The Crime and Security Act 2010 contains provisions for breach of an injunction to be enforced against 14 to 17 year olds; these will be commenced in January 2012.

Tanzania is one of the most bio?iverse countries on the African continent with a long history of conservation. The Tanzanian government remains committed to conserving wildlife resources and their habitats. Legislation on wildlife conservation in Tanzania dates as far back as the 1890’s and from that time, it has been transformed to address modern day challenges and changing wildlife conservation methods. Tanzania is also a party to various international instruments including CITES, UNCAC and UNCTOC. These instruments make provisions for parties to enact legislation that will enhance wildlife law enforcement. They include provisions on regulation of wildlife trade, prevention of organized crime and money laundering and addressing corruption. Tanzania has domesticated these provisions by enacting various pieces of legislation including anti?money laundering laws, prevention of organized crime laws and anti?corruption laws. These laws support the main wildlife legislation in providing harsher penalties for wildlife offences and addressing corruption as a driver of wildlife crimes. Despite all the policy and legislative efforts made by Tanzania to prevent wildlife crime, there has been a worrying loss of wildlife in the recent past. This has been attributed to high demand for wildlife products in Asia, poverty in Tanzania that incentivises wildlife crime, penetration of organised criminal groups into Tanzania and corruption in law enforcement. Tanzania has been working to overcome these challenges and has seen wildlife poaching and trafficking kingpins arrested and handed very hefty penalties which will hopefully deter other wildlife offenders.

This book provides a broad conspectus on the application of EU and international regulation of the food sector on English law. It is aimed at practitioners and students of this vital and emerging branch of law, which has become an important part of current political and legal debate. It is written not just for lawyers as a statement of current law, but is also aimed at all those involved or interested in the food industry who wish to familiarise themselves with how the law is applied practically in this jurisdiction. The book commences with a short conceptual framework for the study of food law. It then provides a comprehensive and up-to-date account of current English law, explaining fully the detailed processes by which both international and national law and EU decision making have impacted upon most aspects of the production, sale and consumption of food in England. The book explains and assesses the operation of the current law by describing in detail the roles of Government, the Food Standards Agency and local enforcement authorities in the making and enforcing of laws concerning food. The work contains full outlines of the developments in the most significant areas of food law. It concentrates specifically on topics such as food labelling and advertising, quality and compositional requirements, geographical food names, genetic modification, organic production, animal welfare and also the role of law in tackling poor health, obesity, and diet-related disease. The book, though primarily designed as a law text, goes beyond the usual confines of such works. It sets out to explain and describe the impact of successive food crises, such as BSE and the use of horsemeat in beef products, on food safety and transparency requirements. The book considers and assesses how the existing rules on the chemical and biological safety of food impact on our law, and concludes with a review of the developing legal issues concerning the environmental impacts of current and proposed food law, in particular the relationship between food law, climate change and food security.
