This book is essential for audio power amplifier designers and engineers for one simple reason...it enables you as a professional to develop reliable, high-performance circuits. The Author Douglas Self covers the major issues of distortion and linearity, power supplies, overload, DC-protection and reactive loading. He also tackles unusual forms of compensation and distortion produced by capacitors and fuses. This completely updated fifth edition includes four NEW chapters including one on The XD Principle, invented by the author, and used by Cambridge Audio. Crosstalk, power amplifier input systems, and microcontrollers in amplifiers are also now discussed in this fifth edition, making this book a must-have for audio power amplifier professionals and audiophiles.

Audio productions are made or broken by the quality of the recording engineer's ears. The ability to properly discern sounds, identify subtle problems, and act accordingly to apply the necessary fix makes all the difference in the quality of the final tracks and master. The good news is that these crucial skills can be learned. The ability to instantly identify frequencies, hear hidden distortions, and instinctively reconcile conflicts in the EQ of instruments, audio elements, vocals and more are traits of those who have mastered the art of audio production. The best engineers have trained their ears to immediately recognize audio problems that the consumer and those new to recording arts would likely not hear, but that, if left unresolved, would result in an amateurish final product. For more than two decades, students of F. Alton Everest's Critical Listening and Auditory Perception courses have rapidly developed these skills by using the intense lessons found in this book and on the CD. Unfortunately the books and CDs included with the course were usually too expensive for aspiring engineers to purchase and were often available only in colleges, universities, or school libraries. Now for the first time these indispensable training sessions are available with this release of Critical Listening Skills for Audio Professionals. Through hundreds of illustrations and an accompanying disc containing high-resolution MP3 files with nearly five hours of narration of the entire course, you can acquire the audio discernment skills of a seasoned recording engineer by studying this course at your own pace, in your own home.

"Behind the Sound Cart: A Veteran's Guide to Sound on the Set" details how the entire Sound team functions on today's movie and television sets, while illuminating the overall picture of life on a production. Patrushkha takes you from the first work call to the final wrap, explaining the order of the work and the details that her decades of experience provides, so you may avoid mistakes that may sabotage your career before it's even started. This book describes the job of the UST (Utility Sound Technician), a career almost invisible, yet extremely interesting, exciting-and paying up to six figures a year. This book details how to act, how to relate to the crew, how to deal with and solve problems that are not just about sound itself-things you don't learn at film school. Patrushkha Mierzwa, one of the first female boom operators in Hollywood, has worked on over 80 movies and television projects for major directors including Robert Rodriguez, Quentin Tarantino, James Gray, and Robert Altman. She has been a judge for the Emmys, an IATSE Sound Local 695 director, and given workshops globally over her long career in the industry. Her Sound Oscar-nominated shows include "Ad Astra" and "Once Upon a Time?in Hollywood". This book condenses 40

years of experience into a practical guide for you to be able to walk onto a film set with the confidence of a sound ninja. -Stuart Wilson, Sound Oscar winner, 1917 This is my go-to reference and should be in every film school on the globe. -Simon Clark, Head of Location Sound Recording, National Film & Television School, England I think this is really going to help students, super down to earth, logical and clear. I knew that it'd be a great book after your visits and sessions with our students. You're a wonderful speaker and your voice comes right through clearly and concisely in this book. Congratulations again and I hope we get to invite you back to Greenwich again in the near future! -Dr Andrew Knight-Hill, University of Greenwich, London.
