The field of occupational health and safety constantly changes, especially as it pertains to biomedical research. New infectious hazards are of particular importance at nonhuman-primate facilities. For example, the discovery that B virus can be transmitted via a splash on a mucous membrane raises new concerns that must be addressed, as does the discovery of the Reston strain of Ebola virus in import quarantine facilities in the U.S. The risk of such infectious hazards is best managed through a flexible and

enforcement practices by focusing on the causes and consequences of the under-criminalisation of these crimes. It explores the fundamentals of these two jurisdictions' criminal justice systems and political practices, policies and traditions and exposes how these translate into pragmatic social inequality and injustice for victims of occupational health and safety crimes and, more generally, citizens. Findings are drawn from qualitative interviews conducted with front line occupational health and safety enforcement officers. This book offers an account of the challenges encountered when attempting to scrutinise public institutions responsible for policing crimes of the powerful. Every year in the UK, hundreds of workers are killed just doing their jobs, thousands more die of illnesses caused by their work and tens of thousands suffer major injuries such as amputations, loss of sight, serious burns, and so on. Worldwide, two million people are killed by work each year. Yet with the exception of high profile cases such as the gas leak at Bhopal, India, which killed tens of thousands, this crime wave fails to attract the interest of the politicians, the media or - least forgiveably of all - the knowledge industry of criminology. This book is concerned with crimes against

worker and public safety, providing an account and analysis of this increasingly important field, and setting this within the broader context of corporate and white-collar crime. It uses case studies and original analyses of official data to illustrate key points and themes, drawing upon both well known and high profile instances of safety crimes as well the mass of ubiquitous 'mundane' or 'routine' deaths and injuries. Thus the book examines how much safety crime is there, how are such offences rendered invisible, and how can their extent be unearthed accurately? Throughout the book the authors analyse the social, legal and political processes that ensure that safety crimes remain subject to under-enforcement and under-criminalisation. This analysis identifies key moments in the historical development of

criminal law and regulation, and assesses the prospects for criminalising safety crimes in the context of contemporary neo-liberal regulatory policies. The theoretical and political justifications for dominant approaches to the regulation and sanctioning of safety criminals are subject to critique in order to develop alternative, more effective, means of criminalisation and punishment. The book concludes with an original analysis of safety crimes that allows us to understand the complexities of the conditions of their production, and develop a more realistic appraisal of the prospects for their amelioration.
