Changes in technology, customer demands, competition, and the social character challenge organizations to innovate and change. How they change depends on their leaders, and their knowledge, and philosophy. To create a better future for organizations and to improve the wellbeing of customers, collaborators and communities, leaders need to be strategic thinkers. This book describes the qualities of strategic intelligence and provides the conceptual tools that equip leaders to improve and transform organizations in the age of knowledge work. These qualities include foresight, visioning, partnering both within and outside the organization, and engaging and motivating collaborators. To develop these qualities, it is necessary to articulate a leadership philosophy and to gain knowledge of systems, variation, personality psychology, and the theory of knowledge. This book uniquely integrates leadership, personality and organization. Michael Maccoby has almost unparalleled experience of working with organizations in a wide variety of contexts. He draws his insights from several disciplines - organization theory, psychoanalysis, anthropology; and from working with distinguished and pioneer thinkers. These include the psychoanalyst Erich Fromm; the systems theorist Russell Ackoff; and management pioneer W. Edwards Deming. A major challenge for leadership today is the transformation of traditional bureaucracies into learning organizations. It can't be done by following formulas or roadmaps. Leaders need the qualities and conceptual tools of strategic intelligence and this book shows them what they must do and provides exercises to develop them.

The application of foresight to address the challenges of uncertainty and rapid change has grown dramatically in the past decade. In that period, the techniques have been greatly refined and the scope has been broadened to encompass future-oriented technology analysis (FTA) and more recently, the concept and practice of strategic intelligence. FTA addresses directly the longer-term future through the active and continuous development of visions, and pathways to realise these visions. It is increasingly seen as a valuable management and policy tool complementing, and extending further into the future, classical strategy, planning, and decision-making approaches. This book charts the development of FTA and provides the first coherent description and analysis of its practical application and impact in the worlds of business, government, education and research in both advanced and developing countries. It draws on papers addressing the application of FTA around the globe which were presented at the Second International Seville Seminar in September 2006. The insights and practical experience will be invaluable for company managers, government ministers and officials, researchers and academics with responsibilities for effective planning and decision-making in an increasingly turbulent and unpredictable world.

Offers a new model of intelligence analysis, the Mosaic Method, which capitalises on both the strengths and the weaknesses of the information revolution. Written by the former CEO of Jane's Information group, it presents analysis of current and past intelligence methods alongside fresh ideas and approaches for the future.

Information in all its forms is at the heart of the economic intelligence process. It is also a powerful vector of innovation and, more than ever, a balance between economic and societal forces. Strategic Intelligence for the Future 1 analyzes the need for the French economic intelligence to mutate in order to develop the economy, strengthen social cohesion and protect vital interests. This mutation requires a change of attitudes and a new way of thinking, widely open to global change and new technologies. The focus of the French economic intelligence on conventional objectives such as business and the economy does not allow for the integration of its multiple possible fields and thus its global nature. The strategy, foresight and temporal dynamics necessary to the understanding of the world, and the new balance of power and control of complex situations, have thus increased the time needed to put this in place. Both theoretical and practical, this book provides a basis from which to develop "enhanced economic intelligence" leading to the implementation of global security.

"This book focuses on environment information scanning and organization-wide support for strategic intelligence. It also provides practical guidance to organizations for developing effective approaches, mechanisms, and systems to scan, refine, and support strategic information provision"--Provided by publisher.

John A. Gentry and Joseph S. Gordon update our understanding of strategic warning intelligence analysis for the twenty-first century. Strategic warning—the process of long-range analysis to alert senior leaders to trending threats and opportunities that require action—is a critical intelligence function. It also is frequently misunderstood and underappreciated. Gentry and Gordon draw on both their practitioner and academic backgrounds to present a history of the strategic warning function in the US intelligence community. In doing so, they outline the capabilities of analytic methods, explain why strategic warning analysis is so hard, and discuss the special challenges strategic warning encounters from senior decision-makers. They also compare how strategic warning functions in other countries, evaluate why the United States has in recent years emphasized current intelligence instead of strategic warning, and recommend warning-related structural and procedural improvements in the US intelligence community. The authors examine historical case studies, including postmortems of warning failures, to provide examples of the analytic points they make. Strategic Warning Intelligence will interest scholars and practitioners and will be an ideal teaching text for intermediate and advanced students.
