When we agreed to share all of our preparation of exercises in sampling theory to create a book, we were not aware of the scope of the work. It was indeed necessary to compose the information, type out the compilations, standardise the notations and correct the drafts. It is fortunate that we have not yet measured the importance of this project, for this work probably would never have been attempted! In making available this collection of exercises, we hope to promote the teaching of sampling theory for which we wanted to emphasise its diversity. The exercises are at times purely theoretical while others are originally from real problems, enabling us to approach the sensitive matter of passing from theory to practice that so enriches survey statistics. The exercises that we present were used as educational material at the École Nationale de la Statistique et de l'Analyse de l'Information (ENSAI), where we had successively taught sampling theory. We are not the authors of all the exercises. In fact, some of them are due to Jean-Claude Deville and Laurent Wilms. We thank them for allowing us to reproduce their exercises. It is also possible that certain exercises had been initially conceived by an author that we have not identified. Beyond the contribution of our colleagues, and in all cases, we do not consider ourselves to be the lone authors of these exercises; they actually form part of a common heritage from ENSAI that has been enriched and improved due to questions from students and the work of all the demonstrators of the sampling course at ENSAI.

This textbook is designed in accordance with the new syllabus and more emphasis is placed in using simple language. The goal of writing this textbook is to focus on students and motivate them to learn and understand the basics and further build upon the introduction to social psychology. The real-life examples given in the book will make the various concepts easy to relate and understand.

This book "Plant Life and Utilization-II for Semester II, Paper I is written strictly as per the new syllabus by referring the standard reference books. So that the students will be able to understand the subject very easily. This will make their concepts very clear.

This book envisages the revised syllabus. The main objectives of book are to introduce the basic physics behind size, effect of nonmaterials and to understand the working principle of equipments used in nanostructures. Students and teachers will gain knowledge of nonmaterials, their properties, their applications, and various growth techniques. Authors have also discussed tools like UV, XRD, SEM and TEM to characterize the nonmaterials. The general impression of physics students is that nonphysics is very difficult. Hence the theory of nonmaterials is prescribed in a simple and lucid manner with the help of neat and clear diagrams.

This book is based on a course Graph theory. We write this book as per the revised syllabus of F.Y. B.Sc.(Computer Science) Mathematics, revised by Savitribai Phule Pune University, Pune, implemented from June 2019. Graph theory is the most useful subject in all branches of mathematics and it is used extensively in applied mathematics and engineering. Graphs theory is the study of graphs, which are mathematical structures used to model pairwise relations between objects. It is a bridge connecting mathematics with various branches of computer science. We study how problems in almost every conceivable discipline can be solved using graph models.

Electronics have made tremendous revolution in last decade. The majority of this revolution is in the digital world. Students entering in the field of Electronics should have understanding of basic fundamentals of digital electronics. This text book has been prepared keeping in mind the need of subject and syllabus specified by SPPU. The First Chapter describes basics of digital electronics which includes number system, logic gates and Boolean algebra.

This book of Sem II Paper II. BO-122: Principles of Plant Science includes "Plant Physiology, Cell Biology and Molecular Biology". It is also written keeping the same tradition. All the topics are written in a highly simplified manner and explained with maximum, well labeled neat diagram. Each chapter is having points to learn, points to remember and exercise. This will help the students for the preparation of fill examination.
