other conservative care and surgical treatments are getting more and more appreciated, Birgit Kumbriak's "K-Taping - An Illustrated Guide", developed by Germany based K-Taping Academy, has rapidly established itself as the ultimate reference book for therapists and clinicians in an ever expanding range of medical disciplines.

Neuromonitoring is the tool of trade in intensive care, and should incorporate cutting edge technology with patience, repeated clinical observation, careful identification of neuroworsening. The aim of the book is to be of practical use, and to assist the clinical practice of the busy physician. The clinical examination belongs to the introductory section of the book, and an abundance of technology, with specific emphasis on the importance of intracranial pressure, comes in the following parts. Since the patient with an injured brain can have chances only if other organs and systems (as the lungs, and the acid-base equilibrium etc.) are preserved, a section of the book covers the interactions between the affected brain and other organs. The way the brain reacts to different insults has common aspects, as inflammatory responses, edema etc., but also specific features. Sections five to nine summarize the most relevant pathologies, from ischemic to hemorrhagic lesions, trauma, tumors etc. and also mentions new comers, as the specific problems related to the expanding field of neuroradiological interventions. Finally, neurointensive care does not exist without knowledgeable nurses. The intracranial pressure measurement starts (or unfortunately ends) with a catheter well maintained, and that becomes vital when the drainage of hydrocephalus is concerned. Dealing with patients with severe brain damage has plenty of ethical implications, up to the problems related to brain death and organ donation. This book is published in two volumes.

Even if clinical and laboratory parameters can be considered as predictors for ADRs, the possibility of a drug-related variation of blood tests is seldom taken into consideration. This easy-to-read book will help physicians in the routine interpretation of laboratory results, drawing their attention to the possibility that abnormal laboratory results may be drug related. The book describes the most common variations (increase/decrease) of blood parameters that can be caused by drug intake. Functions of each blood parameter are schematically reported, together with its standard blood concentration and a list of the most common diseases for whose diagnosis that test is performed. Active principles that can cause an increase or a decrease of that parameter are then listed."

The Years of Alienation in Italy offers an interdisciplinary overview of the socio-political, psychological, philosophical, and cultural meanings that the notion of alienation took on in Italy between the 1960s and the 1970s. It addresses alienation as a social condition of estrangement caused by the capitalist system, a pathological state of the mind and an ontological condition of subjectivity. Contributors to the edited volume explore the pervasive influence this multifarious

concept had on literature, cinema, architecture, and photography in Italy. The collection also theoretically reassesses the notion of alienation from a novel perspective, employing Italy as a paradigmatic case study in its pioneering role in the revolution of mental health care and factory work during these two decades.

Kinesiology taping on human athletes is all the rage: widely used by physical therapists, chiropractors, and personal trainers, we see it on Olympians, runners, basketball players—on amateurs and professionals. The idea behind taping is that it provides incredible support and stabilization of ligaments and tendons while simultaneously stretching and flexing like a "second skin" to allow full range of motion. It can also activate or relax muscles, depending on its application. Our equine athletes can benefit hugely from taping techniques, and this terrific guidebook provides the ultimate reference for understanding both the uses of kinesiology tape and its numerous applications. With hundreds of color photographs and step-by-step instructions for the do-it-yourselfer, equine physiotherapist Katja Bredlau-Morich explains the following forms of kinesiology taping: Muscle - Lymphatic - Scar - Fascia - Space - Hematoma - Stabilization - Tendon - Cross In addition, numerous case studies demonstrate how taping can change your horse's life, keeping him pain-free and performing his best for years to come.
