The prop isn't that large so I made a windmill tower that is just over 6 1/2 feet tall and all from material that can be found at the big box store. Since it is an outdoor decoration I made mine from cedar since it's a naturally rot resistant wood but a slightly cheaper alternative would be to make it from treated or untreated pine.

~~Free Plans on How To Build a Wooden Windmill Tower~~

Windmills works across all of these three dimensions, encouraging our clients to make the greatest difference and have the biggest social and economic impact by exploring opportunities that arise where these three points overlap.

To maximise enjoyment of work and life requires a continual response to the changing world in which we live. Are you living to work or working to live? What would you like to be doing? We need to look within at our latent skills and abilities and explore ways of building on our current talents and developing new aspects of ourselves. Continuing Professional Development explores the importance of continuing professional development (CPD) and the different methods that can be used to analyse development needs and create and implement a CPD plan. It provides practical guidance and a theoretical overview of CPD, including examples and case studies. This fully updated 2nd edition of Continuing Professional Development includes increased coverage of the critical debate about issues in CPD, outlines how to organize and encourage CPD and provides guidance on how senior members of the profession can use and benefit from CPD. Activities and self-diagnostic tools, critical debates about issues and coverage of how to organize and encourage CPD all bring the topic to life for CIPD students undertaking the Professional Development Scheme as well as general readers seeking to encourage CPD in the workplace. Online supporting resources include an instructor's manual and lecture slides.

**A STEP-BY-STEP GUIDE TO BUILDING A SMALL WIND POWER SYSTEM FROM THE GROUND UP** Written by renewable energy experts, this hands-on resource provides the technical information and easy-to-follow instructions you need to harness the wind and generate clean, safe, and reliable energy for on-site use. Build Your Own Small Wind Power System shows you how to install a grid-connected or off-grid residential-scale setup. Get tips for evaluating your site for wind power potential, obtaining permits, financing your project, selecting components, and assembling and maintaining your system. Pictures, diagrams, charts, and graphs illustrate each step along the way. You'll also find out how you can help promote wind-friendly public policies locally. Save money and reduce your carbon footprint with help from this practical guide. **COVERAGE INCLUDES:** Challenges and impacts of small wind energy Electricity, energy, and wind science Determining if wind power is right for you Site assessment Financing small wind power Permits and zoning Wind turbine fundamentals Choosing the right wind turbine for the job Balance of system: batteries, inverters, and controllers Installation, maintenance, and troubleshooting Future developments in wind power

Harnessing the wind can be a tricky business, but in this ground-breaking book the authors provide step-

by-step, illustrated instructions for building a wind generator in a home workshop and then installing it in an off-grid home electrical system. Even if you don't plan on building your own turbine, this book is packed with valuable information for anyone considering wind energy. It covers the basic physics of how the energy in moving air is turned into electricity, and most importantly, it will give you a realistic idea of what wind energy can do for you--and what it can't.

The author builds power-generating windmills at his home near Springfield, Missouri. He has had a life-long interest in water, solar and wind energy. Those interests bubbled and brewed quietly beneath the surface of a teaching career in human anatomy until they blossomed fully in the open space of retirement. After borrowing from other people's designs, and modifying them to better suit his purpose, the windmill plan in this book was settled upon. It can be built by anyone with a modicum of ambition and mechanical ability. The satisfaction derived from successfully building a windmill, and harnessing its power, is enormous, and you are invited to share in it.

This book is the first to show how to integrate Personal Development Planning (PDP) activities into teaching in higher education. It is packed with activities, exercises, lesson plans, resources, reflective questionnaires, skills audits and case studies, and with suggestions for how these may be customized to suit different groups of students in different subject areas. By embedding activities into the curriculum, students are encouraged to engage with the PDP process to help them: gain a better understanding of what and how they are learning improve study skills gain a clear idea strengths and areas for development improve ability to explain and discuss skills and abilities with prospective employers, with the evidence to support your claims become a more effective, independent and confident self-directed learner. Personal Development Planning will help all staff and educational development professionals, teachers in HE, and advisers and support staff in careers services enable students to build up a personal development record to improve their ability to relate their learning and achievements to employers' interests and needs and, ultimately, gain employment.

As the financial and environmental costs of fossil fuels continue to rise, the ancient art of windpower is making a steady comeback, and many countries are promoting wind energy generation as part of a drive toward a sustainable future. Yet many environmental enthusiasts prefer a more do-it-yourself approach. "Windpower Workshop" provides all the essential information for people wanting to build and maintain a windpower system for their own energy needs. Hugh Piggott runs his own successful windpower business in Scotland.

This report provides results of a Nordic seminar held in October 2003 regarding contemporary occupational safety research in the Nordic building and construction industries. The report provides conclusions of roundtable discussions from four plenary sessions regarding accident investigation and prevention, the meaning and significance of safety culture and safety climate, the influence of firm size on occupational safety, and good practices for safety management. In addition, the report contains abstracts of over 75 ongoing or recently completed safety research projects in the Nordic building and construction industries, as well as injury and employment statistics for the period 1992 through 2001.
