~~Journey Inside Your Body Revelation Now: Episode 10 "The Final Firestorm" with Doug Batchelor GCSE Science Revision Biology "The Digestive System" HUMAN DIGESTIVE SYSTEM Made Easy-Gastrointestinal System~~ **The Digestive System The Human**  
Human digestive system, the system used in the human body for the process of digestion. The human digestive system consists primarily of the digestive tract, or the series of structures and organs through which food and liquids pass during their processing into forms absorbable into the bloodstream. The system also consists of the structures through which wastes pass in the process of elimination and other organs that contribute juices necessary for the digestive process.

# Read PDF The Digestive System The Human Body

The human digestive system consists of the gastrointestinal tract plus the accessory organs of digestion (the tongue, salivary glands, pancreas, liver, and gallbladder). Digestion involves the breakdown of food into smaller and smaller components, until they can be absorbed and assimilated into the body.

## **Human digestive system - Wikipedia**

This busy brown organ plays an important role in the human digestive system — it's your largest internal organ and has about 500 different jobs! It's like a chemical processing factory — blood carries nutrients there from the small intestine, then the liver decides what to do with them. It also gets rid of toxins (substances that can be harmful to the body), recycles old blood cells, makes bile and other digestive juices, and produces, stores and releases
