She tracks down the hybridizers, geneticists, farmers, and florists working to invent, manufacture, and sell flowers that are bigger, brighter, and sturdier than anything nature can provide. There's a scientist intent on developing the first genetically modified blue rose; an eccentric horticultural legend who created the most popular lily; a breeder of gerberas of every color imaginable; and an Ecuadorean farmer growing exquisite roses, the floral equivalent of a Tiffany diamond. And, at every turn she discovers the startling intersection of

From the New York Times best-selling author of *The Drunken Botanist* comes an enthralling novel based on the forgotten true story of one of the nation's first female deputy sheriffs. Constance Kopp doesn't quite fit the mold. She towers over most men, has no interest in marriage or domestic affairs, and has been isolated from the world since a family secret sent her and her sisters into hiding fifteen years ago. One day a belligerent and powerful silk factory owner runs down their buggy, and a

When the sheriff enlists her help in convicting the men, Constance is forced to confront her past and defend her family -- and she does it in a way that few women of 1914 would have dared. "A smart, romping adventure, featuring some of the most memorable and powerful female characters I've seen in print for a long time. I loved every page as I followed the Kopp sisters through a too-good-to-be-true (but mostly true!) tale of violence, courage,

A leading medical ethnobotanist tells us the story of her quest to develop new ways to fight illness and disease through the healing powers of plants in this uplifting and adventure-filled memoir. Plants are the basis for an array of lifesaving and health-improving medicines we all now take for granted. Ever taken an aspirin? Thank a willow tree for that. What about life-saving medicines for malaria? Some of those are derived from cinchona and wormwood. In today's world of synthetic pharmaceuticals, scientists

And laypeople alike have lost this connection to the natural world. But by ignoring the potential of medicinal plants, we are losing out on the opportunity to discover new life-saving medicines needed in the fight against the greatest medical challenge of this century: the rise of the post-antibiotic era. Antibiotic-resistant microbes plague us all. Each year, 700,000 people die due to these untreatable infections; by 2050, 10 million annual deaths are expected unless we act now. No one understands this better than Dr. Cassandra Quave, whose groundbreaking
