Jim O'Neill, one of the most influential economists today, shares his insights on how and why he developed one of the most compelling economic concepts of our time in *The Growth Map*. 'O'Neill has redefined how investors and Western business leaders see the world. This book tells the unlikely story of how O'Neill developed this path-breaking idea . . . lively, powerful and highly accessible' Gillian Tett, *Financial Times* Ten years ago, Jim O'Neill predicted

that globalization would help Brazil, Russia, India and China (the BRICs) - busy, ambitious countries full of raw materials - overtake the largest Western economies. With all four BRIC nations set to do just that, no other idea has proved as significant for the new century. But these changes have provoked business and political uncertainty and in The Growth Map O'Neill examines what is coming next. Can the BRICs sustain their exceptional growth? Which nations will come next? And what, for all of us, does the future hold? 'Goldman Sachs' rock star' Business Week 'Sharp, shrewd. Tells the big story of our time. At a time of historic shifts in the underlying dynamics of the world economy, not to mention great uncertainties hanging over the course of economic policy, Jim O'Neill provides a critical roadmap to understanding what really matters over the next several years and beyond. -- Jeffrey Garten, Juan Trippe Professor of International Trade and Finance; Former Undersecretary of Commerce for International Trade, Clinton Administration Jim O'Neill can claim credit for transforming a debate and coining a term that has entered our lexicon: BRIC (Brazil, Russia, India, China). Here he shares a range of insights as to why these large economies are not the powers of the future, but "the powers of the present." -- Linda Yueh,

In 1964 President Lyndon Johnson traveled to Kentucky's Martin County to declare war on poverty. The following year he signed the Appalachian Regional Development Act, creating a state-federal partnership to improve the region's economic prospects through better job opportunities, improved human capital, and enhanced transportation. As the

focal point of domestic antipoverty efforts, Appalachia took on special symbolic as well as economic importance. Nearly half a century later, what are the results? Appalachian Legacy provides the answers. Led by James P. Ziliak, prominent economists and demographers map out the region's current status. They explore important questions, including how has Appalachia fared since the signing of ARDA in 1965? How does it now compare to the nation as a whole in key categories such as education, employment, and health? Was ARDA an effective place-based policy for ameliorating hardship in a troubled region, or is Appalachia still mired in a poverty trap? And what lessons can we draw from the Appalachian

In 1956, presidential-hopeful Marco Rubio's parents came to America as poor immigrants and found a land of opportunity where anyone could build a better future. But now the American Dream is on life support. Millions of Americans have been left behind by an economy that doesn't value their skills and a government that would rather give them a handout

In 2001, Jim O'Neill predicted the fastest growing economies of the past decade. Now he's back to explore the new growth markets we should all be watching closely today. It's been ten years since Jim O'Neill conceived of the BRIC acronym. He and his team made a startling prediction: Four developing nations- Brazil, Russia, India, and China (the

BRICs) would overtake the six largest Western economies within forty years. The BRIC analysis permanently changed the world of global investing, and its accuracy has stood the test of time. The Growth Map features O'Neill's personal account of the BRIC phenomenon, how it has evolved, and where those four key nations currently stand after a turbulent decade. And the book also offers an equally bold prediction about the "Next Eleven" countries: Bangladesh, Egypt, Indonesia, Iran, Mexico, Nigeria, Pakistan, Philippines, South Korea, Turkey, and Vietnam. These developing nations may not seem exceptional today, but they offer exciting opportunities for investors over the next decade, just

as BRIC did before them. O'Neill also shares several compelling insights about the world economy. He reveals the value for growing countries in being "willing to play" by meaningfully committing to policies that encourage further growth and engagement with globalization. He explains how the g20 can adjust to better incorporate the BRICs and to better reflect the balance of the global economy. Finally, O'Neill makes the counterintuitive claim that good things can quite often come from crises. While established economic powers may see the rise of the BRICs as a threat, international trade benefits us all over the long term. Likewise, the recent financial crisis revealed deep problems in our economic

Maps capture data expressing the economic complexity of countries from Albania to Zimbabwe, offering current economic measures and as well as a guide to achieving prosperity Why do some countries grow and others do not? The authors of The Atlas of Economic Complexity offer readers an explanation based on "Economic Complexity," a measure of a society's productive knowledge. Prosperous societies

are those that have the knowledge to make a larger variety of more complex products. The Atlas of Economic Complexity attempts to measure the amount of productive knowledge countries hold and how they can move to accumulate more of it by making more complex products. Through the graphical representation of the "Product Space," the authors are able to identify each country's "adjacent possible," or potential new products, making it easier to find paths to economic diversification and growth. In addition, they argue that a country's economic complexity and its position in the product space are better predictors of economic growth than many other well-known development indicators, including

measures of competitiveness, governance, finance, and schooling. Using innovative visualizations, the book locates each country in the product space, provides complexity and growth potential rankings for 128 countries, and offers individual country pages with detailed information about a country's current capabilities and its diversification options. The maps and visualizations included in the Atlas can be used to find more viable paths to greater productive knowledge and prosperity.
