DIVFor Americans entering the twenty-first century, it is the best of times and the worst of times. Material wealth is at record levels, yet disturbing social problems reflect a deep spiritual poverty. In this compelling book, well-known social psychologist David G. Myers asks how this paradox has come to be and, more important, how we can spark social renewal and dream a new American dream. Myers explores the research on social ills from the 1960s through the 1990s and concludes that the materialism and radical individualism of this period have cost us dearly, imperiling our children, corroding general civility, and diminishing our happiness. However, in the voices of public figures and ordinary citizens he now hears a spirit of optimism. The national dialogue is shifting—away from the expansion of personal rights and toward enhancement of communal civility, away from efforts to raise self-esteem and toward attempts to arouse social responsibility, away from " whose values?" and toward " our values. " Myers analyzes in detail the research on educational and other programs that deal with social problems, explaining which seem to work and why. He then offers positive and well-reasoned advice, suggesting that a renewed social ecology for America will rest on policies that balance " me thinking " with " we thinking. " /div

For pathways to be truly sustainable and advance gender equality and the rights and capabilities of women and girls, those whose lives and well-being are at stake must be involved in leading the way. Gender Equality and Sustainable Development calls for policies, investments and initiatives in sustainable development that recognize women ' s knowledge, agency and decision-making as fundamental. Four key sets of issues - work and industrial production; population and reproduction; food and agriculture, and water, sanitation and energy provide focal lenses through which these challenges are considered. Perspectives from new feminist political ecology and economy are integrated, alongside issues of rights, relations and power. The book untangles the complex interactions between different dimensions of gender relations and of sustainability, and explores how policy and activism can build synergies between them. Finally, this book demonstrates how plural pathways are possible; underpinned by different narratives about gender and sustainability, and how the choices between these are ultimately political. This timely book will be of great interest to students, scholars, practitioners and policy makers working on gender, sustainable development, development studies and ecological economics.

Why is a country with some of the world's most fertile land also the home of so many hungry people? Betsy Hartmann and James Boyce, both Bengali-speaking anthropologists, spent two years in Bangladesh investigating the paradox of hunger in a "basketcase" country that actually produces enough grain for its people. Needless Hunger follows the history and structure of Bangladesh society, and also draws us into the daily lives of the people of Katni, the village where the authors lived. "There is no natural barrier to filling the basic human needs of Bangladesh's people," they conclude. "But there is the man-made barrier of a social order benefiting the few at the expense of the many." They found that the foreign aid pouring into the country actually entrenches the very elite, who keep the majority powerless and hungry. Needless Hunger is also a book of hope, describing the strength and potential of the Bangladesh people, and their desire for a society where food-producing resources are controlled by the majority. Book jacket.

The book focuses on the impact of the 1997-99 economic crisis on human development in Indonesia, especially in 1998, its worst year. Based on the definition used by the UNDP, human development is analysed as covering human capital (education and health) and purchasing power. In this book, the concept of human capital is broadened to include freedom from fear, health, education, and migration. The first part of the book discusses the economic situation in Indonesia. The second elaborat...

Food was a critical front in the Cold War battle for Asia. " Where Communism goes, hunger follows " was the slogan of American nation builders who fanned out into the countryside to divert rivers, remodel villages, and introduce tractors, chemicals, and genes to multiply the crops consumed by millions. This " green revolution " has been credited with averting Malthusian famines, saving billions of lives, and jump-starting Asia ' s economic revival. Bono and Bill Gates hail it as a model for revitalizing Africa ' s economy. But this tale of science triumphant conceals a half century of political struggle from the Afghan highlands to the rice paddies of the Mekong Delta, a campaign to transform rural societies by changing the way people eat and grow food. The ambition to lead Asia into an age of plenty grew alongside development theories that targeted hunger as a root cause of war. Scientific agriculture was an instrument for molding peasants into citizens with modern attitudes, loyalties, and reproductive habits. But food policies were as contested then as they are today. While Kennedy and Johnson envisioned Kansas-style agribusiness guarded by strategic hamlets, Indira Gandhi, Marcos, and Suharto inscribed their own visions of progress onto the land. Out of this campaign, the costliest and most sustained effort for development ever undertaken, emerged the struggles for resources and identity that define the region today. As Obama revives the lost arts of Keynesianism and counter-insurgency, the history of these colossal projects reveals bitter and important lessons for today ' s missions to feed a hungry world.

Provides a comprehensive theological framework in which good eating contributes to the healing of communities and the world.

Ensuring women ' s economic empowerment and access to and control over resources requires an integrated approach to growth and development, focused on gender-responsive employment promotion and informed by the interdependency between economic and social development. Social objectives need to be incorporated into economic policies. Economic growth strategies should give attention to the real economy and focus on creating a gender-sensitive macroeconomic environment, full employment and decent work, access to land, property and other productive resources as well as financial services, and full coverage of social protection measures. The Survey outlines a number of concrete recommendations in these critical areas, which if adopted, will facilitate women ' s equitable access to and control over economic and financial resources.
