In Thing Explainer, Randall Munroe takes a quantum leap past this: he explains things using only drawings and a vocabulary of just our 1,000 (or the ten hundred) most common words. Many of the things we use every day - like our food-heating radio boxes ('microwaves'), our very tall roads ('bridges'), and our computer rooms ('datacentres') - are strange to us.

Thing Explainer: Complicated Stuff in Simple Words is a 2015 illustrated non-fiction book created by Randall Munroe, in which the author attempts to explain various complex subjects using only the 1,000 most common English words. Munroe conceptualized the book in 2012, when drawing a schematic of the Saturn V rocket for his webcomic xkcd. Published by Houghton Mifflin Harcourt, material from Thing Explainer has been incorporated in United States high school textbooks.

Thing Explainer is a book about how things work but only using the most common words in the English language. Randall Munroe, the author of the book, intentionally use simplified words to give equivalents or to explain, which is here and there a bit confusing. The idea is that if you truly understand something you can break it down into simple words enough for anyone to understand.

Thing Explainer: Complicated Stuff in Simple Words. XKCD comic artist Randall Munroe has created a book to explain how things work. Leaving behind technical jargon, he does his best to describe the inner workings of washing machines and dryers, space stations, and airplanes, except that in jettisoning jargon he also abandons the terms "washing machine," "dryer," "space station," and "airplane" in favor of "boxes that make clothes smell better," "shared space house ...

Have you ever tried to learn more about some incredible thing, only to be frustrated by incomprehensible jargon? Randall Munroe is here to help. In Thing Explainer, he uses line drawings and only the thousand (or, rather, "ten hundred") most common words to provide simple explanations for some of the most interesting stuff there is, including: food-heating radio boxes (microwaves) tall roads (bridges) computer buildings (datacenters) the shared space house (the International Space Station) the other worlds around the sun (the solar system) the big flat rocks we live on (tectonic plates) the pieces everything is made of (the periodic table) planes with turning wings (helicopters) boxes that make clothes smell better (washers and dryers) the bags of stuff inside you (cells) How do these things work? Where do they come from? What would life be like without them? And what would happen if we opened them up, heated them up, cooled them down, pointed them in a different direction, or pressed this button? In Thing Explainer, Munroe gives us the answers to these questions and so many more. Funny, interesting, and always understandable, this book is for anyone--age 5 to 105--who has ever wondered how things work, and why.

From the No. 1 bestselling author of What If? - the man who created xkcd and explained the laws of science with cartoons - comes a series of brilliantly simple diagrams ('blueprints' if you want to be complicated about it) that show how important things work: from the nuclear bomb to the biro. It's good to know what the parts of a thing are called, but it's much more interesting to know what they do. Richard Feynman once said that if you can't explain something to a first-year student, you don't really get it. In Thing Explainer, Randall Munroe takes a quantum leap past this: he explains things using only drawings and a vocabulary of just our 1,000 (or the ten hundred) most common words. Many of the things we use every day - like our food-heating radio boxes ('microwaves'), our very tall roads ('bridges'), and our computer rooms ('datacentres') - are strange to us. Presents personal selections and fan favorites from the online comic.

AN INSTANT #1 NEW YORK TIMES BESTSELLER “How To will make you laugh as you learn...With How To, you can't help but appreciate the glorious complexity of our universe and the amazing breadth of humanity's effort to comprehend it. If you want some lightweight edification, you won't go wrong with How To.” —CNET “[How To] has science and jokes in it, so 10/10 can recommend.” —Simone Giertz The world's most entertaining and useless self-help guide from the brilliant mind behind the wildly popular webcomic xkcd and the bestsellers What If? and Thing Explainer For any task you might want to do, there's a right way, a wrong way, and a way so monumentally complex, excessive, and inadvisable that no one would ever try it. How To is a guide to the third kind of approach. It's full of highly impractical advice for everything from landing a plane to digging a hole. Bestselling author and cartoonist Randall Munroe explains how to predict the weather by analyzing the pixels of your Facebook photos. He teaches you how to tell if you're a baby boomer or a 90's kid by measuring the radioactivity of your teeth. He offers tips for taking a selfie with a telescope, crossing a river by boiling it, and powering your house by destroying the fabric of space-time. And if you want to get rid of the book once you're done with it, he walks you through your options for proper disposal, including dissolving it in the ocean, converting it to a vapor, using tectonic plates to subduct it into the Earth's mantle, or launching it into the Sun. By exploring the most complicated ways to do simple tasks, Munroe doesn't just make things difficult for himself and his readers. As he did so brilliantly in What If?, Munroe invites us to explore the most absurd reaches of the possible. Full of clever infographics and fun illustrations, How To is a delightfully mind-bending way to better understand the science and technology underlying the things we do every day.

The creator of the incredibly popular webcomic xkcd presents his heavily researched answers to his fans' oddest questions, including “What if I took a swim in a spent-nuclear-fuel pool?” and “Could you build a jetpack using downward-firing machine guns?” 100,000 first printing.

The instant New York Times bestseller! A Wall Street Journal Best Science Book of the Year! A Popular Science Best Science Book of the Year! From a top scientist and the creator of the hugely popular web comic Saturday Morning Breakfast Cereal, a hilariously illustrated investigation into future technologies -- from how to fling a ship into deep space on the cheap to 3D organ printing What will the world of tomorrow be like? How does progress happen? And why do we not have a lunar colony already? What is the hold-up? In this smart and funny book, celebrated cartoonist Zach Weinersmith and noted researcher Dr. Kelly Weinersmith give us a snapshot of what's coming next -- from robot swarms to nuclear fusion powered-toasters. By weaving their own research, interviews with the scientists who are making these advances happen, and Zach's trademark comics, the Weinersmiths investigate why these technologies are needed, how they would work, and what is standing in their way. New technologies are almost never the work of isolated geniuses with a neat idea. A given future technology may need any number of intermediate technologies to develop first, and many of these critical advances may appear to be irrelevant when they are first discovered. The journey to progress is full of strange detours and blind alleys that tell us so much about the human mind and the march of civilization. To this end, Soonish investigates ten different emerging fields, from programmable matter to augmented reality, from space elevators to robotic construction, to show us the amazing world we will have, you know, soonish. Soonish is the perfect gift for science lovers for the holidays!

New York, the city. New York, the magazine. A celebration. The great story of New York City in the past half-century has been its near collapse and miraculous rebirth. A battered town left for dead, one that almost a million people abandoned and where those who remained had to live behind triple deadbolt locks, was reinvigorated by the twinned energies of starving artists and financial white knights. Over the next generation, the city was utterly transformed. It again became the capital of wealth and innovation, an engine of cultural vibrancy, a magnet for immigrants, and a city of endless possibility. It was the place to be—if you could afford it. Since its founding in 1968, New York Magazine has told the story of that city's constant morphing, week after week. Covering culture high and low, the drama and scandal of politics and finance, through jubilant moments and immense tragedies, the magazine has hit readers where they live, with a sensibility as fast and funny and urbane as New York itself. From its early days publishing writers like Tom Wolfe, Jimmy Breslin, and Gloria Steinem to its modern incarnation as a laboratory of inventive magazine-making, New York has had an extraordinary knack for catching the Zeitgeist and getting it on the page. It was among the originators of the New Journalism, publishing legendary stories whose authors infiltrated a Black Panther party in Leonard Bernstein's apartment, introduced us to the mother-daughter hermits living in the dilapidated estate known as Grey Gardens, launched Ms. Magazine, branded a group of up-and-coming teen stars “the Brat Pack,” and effectively ended the career of Roger Ailes. Again and again, it introduced new words into the conversation—from “foodie” to “normcore”—and spotted fresh talent before just about anyone. Along the way, those writers and their colleagues revealed what was most interesting at the forward edge of American culture—from the old Brooklyn of Saturday Night Fever to the new Brooklyn of artisanal food trucks, from the Wall Street crashes to the hedge-fund spoils, from The Godfather to Girls—in ways that were knowing, witty, sometimes weird, occasionally vulgar, and often unforgettable. On “The Approval Matrix,” the magazine's beloved back-page feature, New York itself would fall at the crossroads of highbrow and lowbrow, and more brilliant than despicable. (Most of the time.) Marking the magazine's fiftieth birthday, Highbrow, Lowbrow, Brilliant, Despicable: 50 Years of New York draws from all that coverage to present an enormous, sweeping, idiosyncratic picture of a half-century at the center of the world. Through stories and images of power and money, movies and food, crises and family life, it constitutes an unparalleled history of that city's transformation, and of a New York City institution as well. It is packed with behind-the-scenes stories from New York's writers, editors, designers, and journalistic subjects—and frequently overflows its own pages onto spectacular foldouts. It's a big book for a big town.

Looking for trivia books filled with fun facts and trivia questions and answers? Answers to Questions You've Never Asked will entertain you for hours. Fun facts for kids of all ages: When you take the most absurd parts of history, science, economics and geography, you end up with

a pretty confusing picture of humanity. Why do we have borders, what's the furthest you can get from the ocean, how do you qualify as a country and why did Vikings wear those silly helmets? These are just a few of the strange questions that bounce around the head of YouTube sensation Joseph Pimenti, aka RealLifeLore. Trivia questions and answers: In his channel, Pimenti presents illogical truths in a logical manner. In his debut book, Pimenti builds on this nonsensical humor of the universe with in-depth analysis of empires, economies, and ecosystems as he helps answer the ridiculous. Why, you ask? Because someone has to. Using line drawings, graphs and charts, Pimenti not only details the absurd, but he also provides explanations on why things are...and why they aren't. Answers to: • Where can I move to so that I'm never tempted by McDonalds again? • How far into the Pacific does Trump's wall stretch? • If Plato came back to life, what would he think of modern democracy? • Why do all empires fail? • Who decides what countries are allowed to participate in the Olympics? • What makes Finland so great? Witty, thought-provoking and occasionally snarky, Answers to Questions You've Never Asked is for anyone who beams with curiosity and has a belly-button.
