Can Career, Technical and Vocational Education and Training (CTVET) serve as a tool for poverty alleviation and solve economic problems for nations? CTVET include a wide range of learning experiences which are relevant to the world of work and which may occur in a variety of learning contexts, including educational institutions and the workplace. These include learning designed to develop the skills for practicing particular occupations and careers, as well as learning designed to prepare for entry or re-entry into the world of work in general. (Adopted from Morris, 2015 and UNESCO, 2006)

Introduces students to the importance of the customer service component of a business.

This book presents how tourism initiates economic development and how constraints to the growth of tourism in Sub-Saharan Africa can be addressed. With 24 case studies that illustrate tourism development, it reveals that despite destination challenges, the basic elements needed to initialize or intensify success are applicable across the region.

The notion of "mobilities," when looked at from a practical point of view, turns out to cover different kinds of human activity. It is not surprising, then, that when approached from an academic perspective, it reveals enormous potential for interdisciplinary research, which has proven extremely attractive to many scholars from different continents, disciplines, and schools of academic inquiry. The scholars in this volume focus on the specific aspects of mobilities, namely, tourism and travel behavior, but approach them from a plethora of positions. Such a myriad of perspectives is bound to be challenging in methodological terms, but it seems there is a growing agreement as to the worthiness of this interdisciplinary research. By means of combining various approaches, researchers obtain access to a fascinating and increasingly ubiquitous phenomenon of contemporary human mobility.

Volcanic eruptions are common, with more than 50 volcanic eruptions in the United States alone in the past 31 years. These eruptions can have devastating economic and social consequences, even at great distances from the volcano. Fortunately many eruptions are preceded by unrest that can be detected using ground, airborne, and spaceborne instruments. Data from these instruments, combined with basic understanding of how volcanoes work, form the basis for forecasting eruptions—where, when, how big, how long, and the consequences. Accurate forecasts of the likelihood and magnitude of an eruption in a specified timeframe are rooted in a scientific understanding of the processes that govern the storage, ascent, and eruption of magma. Yet our understanding of volcanic systems is incomplete and biased by the limited number of volcanoes and eruption styles observed with advanced instrumentation. Volcanic Eruptions and Their Repose, Unrest, Precursors, and Timing identifies key science questions, research and observation priorities, and approaches for building a volcano science community capable of tackling them. This report presents goals for making major advances in volcano science.

This book is a definitive examination of higher education: locating it in a wider neo-liberal context involving the state and the market, with a specific focus on recent higher policy and on the elite group of senior managers in universities. Written in a clear accessible style, it provides an in-depth analysis of university structures, cultures and practices at senior management level. Despite the managerialist rhetoric of accountability, we see structures where access to power is through the Presidents' "blessing", very much as in a medieval court. We see a culture that is less than comfortable with the presence of women, and which, in its narratives, stereotypes and interactions exemplifies to a rather nineteenth-century view of women. Sites and sources of change are also identified. In a global context where diversity is crucial to innovation, it challenges us to critically reflect on management and on higher education.

Tourism Impacts, Planning and Management is a unique text, which links these three key areas of tourism: impacts, planning and management. **Tourism impacts** are multi-faceted and therefore difficult to plan for and manage. This book looks at all the key players involved - be they tourists, host communities or industry members - and considers a number of approaches and techniques for managing tourism successfully. Divided into four parts, this text discusses: * The growth, development and impacts of tourism * Tourism planning and management: concepts, issues and key players * Tools and techniques in tourism planning and management: education, regulation and information technology * The future of tourism planning and management: issues of sustainability and the future Up-to-date, international case studies are used, for example the impacts of 9/11 and terrorism in Bali, to illustrate and provide a real-life context for the theories discussed. Exercises are also included to consolidate learning.
