Every year, executives debate whether to release their Super Bowl advertisements early on social media or whether this early release will hurt the surprise and impact of being seen.

Public Health is regarded as the basis and cornerstone of health, generally and in medicine. Defined as the science and art of preventing disease, prolonging life and promoting health through the organized efforts and informed choices of society, organizations, public and private, communities and individuals, this discipline has been renewed by the incorporation of multiple actors, professions, knowledge areas and it has also been impacted and promoted by multiple technologies, particularly - the information technology. As a changing field of knowledge, Public Health requires evidence-based information and regular updates. Current Topics in Public Health presents updated information on multiple topics related to actual areas of interest in this growing and exciting medical science, with the conception and philosophy that we are working to improve the health of the population, rather than treating diseases of individual patients, taking decisions about collective health care that are based on the best available, current, valid and relevant evidence, and finally within the context of available resources. With participation of authors from multiple countries, many from developed and developing ones, this book offers a wide geographical perspective. Finally, all these characteristics make this book an excellent update on many subjects of world public health.

In recent years, we have begun to recognise the rising threat of Multidrug Resistant Organisms (MDORs), and the profound impact that healthcare associated infections (HCAIs), such as MRSA, can have on both patient safety and quality of care. HCAIs prolong patients' hospital stays, and increase morbidity as well as mortality rates, yet diagnosing and treating these infections is a costly process that can place intense pressure on already limited healthcare resources. The updated and significantly expanded new edition of Manual of Infection Prevention and Control is a practical handbook that provides a comprehensive overview of HCAI control and prevention in all healthcare facilities. Clear diagrams and quick-access tables give step-by-step instructions to guide the reader through real-life prevention strategies

It is also a valuable reference for environmental health officers, health educators, practice managers in GP surgeries, and health service managers.

Hospital and Healthcare Security, Fifth Edition, examines the issues inherent to healthcare and hospital security, including licensing, regulatory requirements, litigation, and accreditation standards. Building on the solid foundation laid down in the first four editions, the book looks at the changes that have occurred in healthcare security since the last edition was published in 2001. It consists of 25 chapters and presents examples from Canada, the UK, and the United States. It first provides an overview of the healthcare environment, including categories of healthcare, types of hospitals, the nonhospital side of healthcare, and the different stakeholders. "Good for you! You've taken the first step in a lifelong journey to learn what you can do to help end racism. Maybe you've seen someone treated unfairly just because of the color of their skin. Maybe you were treated unfairly because of the color of yours. Maybe you've seen protests in the news and wondered what they're really all about. Whatever reason you picked up this book, you're here because you want to make a difference and change things for the better, and that's awesome! There's a lot to learn about race and racism. But don't be overwhelmed-we'll take it step by step. First learn the language and concepts of race and racism. Then we can start to think about what changes we can make in ourselves, in our communities, and in the world that can help stop racism. There are lots of ideas in this book for thinking bigger and learning new skills as we work to end racism all around us. Imagine a world where everyone is treated fairly and no one is hurt or looked down on because of the color of their skin. Think about all the good that will come when everyone feels valued, respected, and cared for-no matter who they are. That's a world that's worth fighting for, so let's go!"--

Health care-associated infections (HAI) are one of the most common adverse events in care delivery and a major public health problem with an impact on morbidity, mortality and quality of life. At any one time, up to 7% of patients in developed and 10% in developing countries will acquire at least one HAI. These infections also present a significant economic burden at the societal level. However, a large percentage are preventable through effective infection prevention and control (IPC) measures. These new guidelines on the core components of IPC programmes at the national and facility level will enhance the capacity of Member States to develop and implement effective technical and behaviour modifying interventions. They form a key part of WHO strategies to prevent current and future threats from infectious diseases such as Ebola, strengthen health service resilience, help combat antimicrobial resistance (AMR) and improve the overall quality of health care delivery. They are also intended to support countries in the development of their own national protocols for IPC and AMR action plans and to support health care facilities as they develop or strengthen their own approaches to IPC. These are the first international evidence-based guidelines on the core components of IPC programmes. These new WHO guidelines are applicable for any country and suitable to local adaptations, and take account of the strength of available scientific evidence, the cost and resource implications, and patient values and preferences.
