Segregation by Design draws on more than 100 years of quantitative and qualitative data from thousands of American cities to explore how local governments generate race and class segregation. Starting in the early twentieth century, cities have used their power of land use control to determine the location and availability of housing, amenities (such as parks), and negative land uses (such as garbage dumps). The result has been segregation - first within cities and more recently between them. Documenting changing patterns of segregation and their political mechanisms, Trounstein argues that city governments have pursued these policies to enhance the wealth and resources of white property owners at the expense of people of color and the poor. Contrary to leading theories of urban politics, local democracy has not

Urban segregation is one of the main challenges facing urban development around the globe. The usual outcome of many urban development patterns is an unequal social geography, with the urban poor living in large clusters that are remote, isolated, dangerous or unhealthy. The result is inequality in a number of dimensions of urban life, from deficient urban access, services or infrastructure to social isolation, neighbourhood violence, and lack of economic opportunity. This book brings together debates on ethnic and economic segregation, combining theory and practical solutions to

The Fair Housing Act of 1968 outlawed housing discrimination by race and provided an important tool for dismantling legal segregation. But almost fifty years later, residential segregation remains virtually unchanged in many metropolitan areas, particularly where large groups of racial and ethnic minorities live. Why does segregation persist at such high rates and what makes it so difficult to combat? In *Cycle of Segregation*, sociologists Maria Krysan and Kyle Crowder examine how everyday social processes shape

residential stratification. Past neighborhood experiences, social networks, and daily activities all affect the mobility patterns of different racial groups in ways that have cemented segregation as a self-perpetuating cycle in the twenty-first century. Through original analyses of national-level surveys and in-depth interviews with residents of Chicago, Krysan and Crowder find that residential stratification is reinforced through the biases and blind spots that individuals exhibit in their searches for housing. People rely heavily on information from friends, family, and coworkers when choosing where to live. Because these social networks tend to be racially homogenous, people are likely to receive information primarily from members of their own racial group and move to neighborhoods that are also dominated by their group.

Similarly, home-seekers who report wanting to stay close to family members can end up in segregated destinations because their relatives live in those neighborhoods. The authors suggest that even absent of family ties, people gravitate toward neighborhoods that are familiar to them through their past experiences, including where they have previously lived, and where they work, shop, and spend time. Because historical segregation has shaped so many of these experiences, even these seemingly race-neutral decisions help reinforce the cycle of residential stratification. As a result, segregation has declined much more slowly than many social scientists have expected. To overcome this cycle, Krysan and Crowder advocate multi-level policy solutions that pair inclusionary zoning and affordable housing with education

and public relations campaigns that emphasize neighborhood diversity and high-opportunity areas. They argue that together, such programs can expand the number of destinations available to low-income residents and help offset the negative images many people hold about certain neighborhoods or help introduce them to places they had never considered. Cycle of Segregation demonstrates why a nuanced understanding of everyday social processes is critical for interrupting entrenched patterns of residential segregation.

consequences, including differential access to and quality of education, health and other services. This volume uses the recent availability of geo-coded census data and techniques of spatial analysis to conduct the first detailed comparative examination of residential segregation in six major Latin American metropolises, with Austin, Texas, as a US comparison. It demonstrates the high degree of residential segregation of contemporary Latin American cities and discusses implications for the welfare of urban residents.

international researchers to shed light on the entwined processes of inequality and segregation, and the implications for urban development. Through a rich collection of empirical studies at the city, regional and national levels, the book explores the impact of migration on cities, the related problems of social and spatial segregation, and the ramifications for policy reform. While the literature on both segregation and inequality has traditionally been dominated by European and North American studies, there is growing interest in these issues in the Chinese context. Economic liberalization, rapid industrial restructuring, the enormous growth of cities, and internal migration, have all reshaped the country profoundly. What have we learned from the European and North American experience of segregation and

inequality, and what insights can be gleaned to inform the burgeoning interest in these issues in the Chinese context? How is China different, both in terms of the nature and the consequences of segregation inequality, and what are the implications for future research and policy? Given the continued rise of China's significance in the world, and its recent declaration of war on poverty, this book offers a timely contribution to scholarship, identifying the core insights to be learned from existing research, and providing important guidance on future directions for policy makers and researchers.

Spatial organization (places and neighbourhoods) matters significantly in some cities in reproducing class relations and ethno-racial hierarchies, but may be much less important in others. The degree and the impact of segregation depend upon contextual diversity. By emphasizing the importance of contextual diversity in the study of urban residential segregation, the book questions currently popular urban theories such as global city, neoliberal urbanism, and gentrification. These theories tend to dissociate cities from their national and regional context and thus ignore their history, culture, politics and institutions. The aim of this book is to introduce the significantly different urban experiences in social and spatial segregation patterns and rationales which
