Water International, official journal of the International Water Resources Association, studies sustainability management of water resources around the world. Search in: This Journal Anywhere Advanced search

This volume is part of the Ceramic Engineering and Science Proceeding (CESP) series. This series contains a collection of papers dealing with issues in both traditional ceramics (i.e., glass, whitewares, refractories, and porcelain enamel) and advanced ceramics. Topics covered in the area of advanced ceramic include bioceramics, nanomaterials, composites, solid oxide fuel cells, mechanical properties and structural design, advanced ceramic coatings, ceramic armor, porous ceramics, and more.

In a world held in the grip of economic downfall - with increasing scarcity of energy supplies, plummeting oil prices, rising intra-state energy transit, protectionist natural resources policies, and growing environmental concerns - time and cost are not to be underestimated factors in the choice of a suiting dispute resolution method. This book covers the hot topics related to the Energy Charter Treaty, not only from a theoretical point of view, but also from practical experiences in France, the UK, and Belgium. Moreover, this publication is original in that it addresses the issue of soft law in investment arbitration and includes a fictional case elaborating on the influence of different interest groups in energy disputes.

This volume is part of the Ceramic Engineering and Science Proceeding (CESP) series. This series contains a collection of papers dealing with issues in both traditional ceramics (i.e., glass, whitewares, refractories, and porcelain enamel) and advanced ceramics. Topics covered in the area of advanced ceramic include bioceramics, nanomaterials, composites, solid oxide fuel cells, mechanical properties and structural design, advanced ceramic coatings, ceramic armor, porous ceramics, and more.

This book outlines the strategies used in the investigation, characterization, management, and restoration and remediation for various contaminated sites. It draws on real-world examples from across the globe to illustrate remediation techniques and discusses their applicability. It provides guidance for the successful corrective action assessment and response programs for any type of contaminated land problem, and at any location. The systematic protocols presented will aid environmental professionals in managing contaminated land and associated problems more efficiently. This new edition adds twelve new chapters, and is fully updated and expanded throughout.
