Using the results of these exercises, readers construct a "hot list" of the college majors that seem to suit them the most, plus any others that look interesting. Then they explore their possible choices by reading fact-packed descriptions of 61 popular college majors and the 164 occupations and 95 job specializations linked to these majors. Finally, readers fill out a decision-making checklist, comparing the results of their self-assessment exercises with the facts they have learned about various majors. They weigh the pros and cons to reach a tentative conclusion and receive hints about how to do additional exploration to confirm their decision. With *Quick Guide to Choosing Your College Major*, the reader will be able to determine their future path fast!

Colander and Kim Marie McGoldrick assembled a most able panel of contributors for this effort that includes dialogue on what should be taught, how it should be taught, and how that teaching and learning should be assessed and rewarded. To the editors credit, they have not attempted to dictate policy but to stimulate debate on the topics. This volume is a must read for anyone seriously interested in the teaching of economics at the tertiary level. William E. Becker, Indiana University, Bloomington, US The economics major is a central part of a college education. But is that economics major doing what it is meant to do? And if not, how should it be changed? This book raises a set of provocative questions that encourage readers to look at the economics major in a different light than it is typically considered and provides a series of recommendations for change. Responding to a Teagle Foundation initiative on the role of majors in higher education, the contributors eminent economists and administrators consider the relationship between the goals and objectives of the economics major and those of a liberal education. They address questions such as: What is the appropriate training for a person who will be teaching in a liberal arts school? What incentives would motivate the creation of institutional value through teaching and not simply research? They also explore whether the disciplinary nature of undergraduate education is squeezing out the big-think questions, and replacing them with little-think questions, and whether we should change graduate training of economists to better prepare them to be teachers, rather than researchers. Providing a stimulating discussion of the economics major by many of the leaders in US economic education, this book will prove a thought provoking read for those with a special interest in economics and economics education, particularly academics, lecturers, course administrators, students and researchers.

Completion of a college degree, as reflected by graduation rates, is a priority for campus administrators, politicians, families, and students. When students do not graduate, it has an effect on students, families, institutions, and surrounding communities. Colleges and universities, whether public or private, may find financial support declining when graduation rates do not improve. Debt acquired during college can be costly for students who drop-out before earning a degree. Some students, parents, administrators, faculty, and staff perceive that students making an early decision about a major is necessary for success in college. Many believe that enrolling as undeclared contributes to student attrition from college. Significant numbers of first-time in college students enroll each year without having chosen a major. Previous research examining undeclared students, however, is limited, conflicting, and dated. Still, increasingly, administrators and other stakeholders agree on two things: students should persist to graduation and students should declare a major as early as possible. This was an ideal time, therefore, to examine whether these two things were in fact correlated to one another. The study was conducted through the conceptual frame provided by Astin's (1993) I-E-O model in order to determine if matriculating in an undeclared versus declared

academic program was predictive of college student persistence and degree completion, taking into consideration student demographics, pre-college academic performance, institutional sub-environments, high-impact educational practice participation, and within-college academic performance. For this study, the term undeclared was defined as those students who matriculate to the institution without having a degree-granting major. The logistic regression models conducted for this study resulted in the finding that there are no differences in persistence or on-time graduation for declared and undeclared students. The study concludes that research into factors impacting persistence and completion should focus on factors other than major declaration at matriculation. Because declared and undeclared students are quite alike, especially when one considers college student persistence, colleges and universities should encourage and permit students to explore their options for majors as opposed to making premature, uninformed decisions. Institutional policy and practice should be adjusted to consider all students as in need of major exploration.
