aspects of these themes. As the beer industry continues to reinvent itself and its economic and cultural geographies, this book showcases historical, current, and future trends at the local, regional, national, and international scales.

An intriguing view of the Canadian economy before WWI, this study fills a gap in the existing literature on the economic history of Canada. Using improved monetary statistics, the author explains how the business cycle worked under the gold standard, and takes an in-depth look at the roles the banks, the government and the public played in relation to Canada's balance of payments and the gold stock.

The main objective in writing a thesis or dissertation is to teach students how to conduct research in a planned and systematic way. Health Promotion and amp; Education Research Methods, Second Edition provides a comprehensive and thorough presentation of the skills and processes needed to complete high quality research. Students will receive an overview of the different approaches to research methods and are introduced to the five-chapter thesis or dissertation format. Each chapter contains information relevant to the writing of one or more chapters of a thesis or dissertation. Designed for health e

This new edition of a core undergraduate textbook for construction managers reflects current best practice, topical industry preoccupations and latest developments in courses and

fundamentals subjects for students. While the construction process still requires traditional skills, changes over recent decades today demand improved understanding of modern business, production and contractual practices. The authors have responded accordingly and the book has undergone a thorough re-write, eliminating some of the older material and adding new processes now considered essential to achieving lean construction. Particular emphasis is given, for example, to supply chains and networks, value and risk management, BIM, ICT, project arrangements, corporate social responsibility, training, health and welfare and environmental sustainability. Modern Construction Management presents construction as a socially responsible, innovative, carbon-reducing, manager-involved, people-orientated, crisis-free industry that is efficient and cost effective. The overall themes for the Seventh Edition are: Drivers for efficiency: lean construction underpinning production management and off-site production methods. Sustainability: reflecting the transition to a low carbon economy. Corporate Social Responsibility: embracing health & safety, modernistic contracts, effective procurement, and employment issues. Building Information Management: directed towards the improvement of construction management systems. The comprehensive selection of worked examples, based on real and practical situations in construction management and methods will help to consolidate learning. A companion website at <http://www.wiley.com/go/MCM7> offers invaluable support material for both tutors and students: Solutions to the self-learning exercises PowerPoint slides with discussion topics Journal and web references Structured to reflect site, business and corporate responsibilities of managers in construction, the book continues to provide strong coverage of the salient elements required for developing and equipping the modern

construction manager with the competencies and skills for both technical and business related areas.

Phelan and Reynolds' book is for anyone who needs to evaluate arguments and interpret evidence. It deals with the most fundamental aspects of academic study: \* the ability to reason with ideas and evidence \* to formulate arguments effectively \* to appreciate the interplay between ideas and evidence in academic and media debate Argument and Evidence presents aspects of informal logic and statistical theory in a comprehensible way, enabling students to acquire skills in critical thinking which will outlast their undergraduate studies. Ideal as a companion for courses on methodology or study skills, Argument and Evidence will also be useful for other disciplines in the social sciences and humanities.

The book addresses the problem of accuracy of spatial databases, and comprises of papers drawn from a wide range of physical and human systems, taking approaches which vary from statistical to descriptive. Together they present both a comprehensive review of existing knowledge, techniques and experience, and an analysis of critical research needs in this area of spatial data handling.

The papers contained in this volume were originally presented at the International symposium on New Directions in Urban Systems Modelling held at the University of Waterloo in July, 1983. The papers have been reviewed and rewritten since that time. The exception is the introductory paper written specially by Manfred Fischer and Peter Nijkamp as an introduction to
